

“Teacher’s journey to modern technology”

Dr.Jayashree Kalita

Guest Faculty,
Department of Assamese,
Dispur College Guwahati Assam India.

Abstract: Teachers play a significant role in the teaching-learning process and supposed as the central element in this process. It has been challenged to offer better education to more people with the applications of modern technological devices. Without introduces of modern technological devices, teachings work and struggles in the classroom becomes meaningless. Teachers of today have to keep active and smart with the new techniques and skills to provide the proper knowledge and fruitful classes. Teacher’s prime duty is to concern the students working habits, attitudes, motivation and knowledge which are all central factors in teaching-learning process.

Keywords— Teacher, ICT, motivation, learning processes.

1. Introduction

In the twenty first century, teachers have to face a great challenge for adapting education to have needs of ever changing modern society. In every steps of life changes take place with the march of modern scientific and technological advancements. With the introduction of some modern techniques of communication like computer network, internet, television, cell phone acquisition and processing of information have acquired new dimensions. The Gurus have the main responsibility to spread the information and knowledge from generation to generation. Besides, at present education system the Guru could spread varied sources of information and knowledge. The teachers required to keep a close contact with the mass communication media which proceed him or her as most effective educator. To mat the classroom teaching effective, one has to excel in the art of teaching so that he/she could prove that nothing can replace the teacher. It’s a big challenge for the teaching community in leading the nation to a better position. The realism and success of a teacher is to help the children and make them perfect to face the problems in life with courage. In today’s education teachers have to face practical of problems in providing the proper education to children to make their all-round developments.

2. Objective

Aim of establish the teachers role in teaching-learning process in the world of modern technology.

3. Methodology

Both the descriptive and analytical methods are used.

4. Discussion

Teaching-learning process has been supposed as one of the main instrument of social, economic and cultural exchange of society. This process is changed in different times by the demands of society. The professional teachers of some institutions dominated the teaching-learning process. But, now an individual learner is expected to take-up his/her challenges in terms of intellectual revolution. Various types of new factors have been introduced like projects, factories, farms, market, excursions and playground which become classroom in the new teaching-learning process. It is said that good teachers are the creators of good schools. Teachers have the responsibilities to improve the quality of schools. The most perfect syllabus remains dead without teachers. Teachers can make the destiny of a nation by providing proper learning in the right direction. The future of a nation depends upon the teachers. An expert teacher can make learning fruitful by using efficient method, attractive lectures, discussions, demonstration, experimentations, projects and field trips etc. teachers have to keep a sharp notice about the growth and development and understanding of the pupils. The personality of a teacher has great impact on the pupils which encourages desirable traits of personality among the children. The public become interested by the activities of the teachers in the achievements of the pupils is scholastic field in the exports and cultural programmes. During the visit of school by the parents, teacher can create a good impression showing respect to their ideas.

5. Conclusion

In conclude this topic; it is important that human beings must remain as the central element in the education. Through we are living in the society of modern technology, but we cannot equate education technology with teaching machines. The concept has rapidly changes in the field of education. We all are bound to accept the changes of classroom equipments like teaching machines, programmed texts, language laboratories and television. The uses of modern educational technology are the teaching-learning process makes learning effective and arouse the curiosity of learning among the children.
