## Abstract

Inclusive Education (IE) is a new approach towards educating the children with disability and learning difficulties with that of normal ones within the same roof. It brings all students together in one classroom and community, regardless of their strengths or weaknesses in any area, and seeks to maximize the potential of all students. It is one of the most effective ways in which to promote an inclusive and tolerant society. It is known that 73 million children of primary school age were out of school in 2010, down from a high of over 110 million out-of-school children in the mid-1990s, according to new estimates by the UNESCO Institute for Statistics (UIS). About Eighty percent of Indian population lives in rural areas without provision for special schools. It means, there are an estimated 8 million children out of school in India (MHRD 2009 statistics), many of whom are marginalised by dimensions such as poverty, gender, disability, and caste. Today, what are the needs and challenges for achieving the goal of inclusive education? How will an inclusive environment meet the needs of children with disabilities? How quality education can be effectively and efficiently delivered for all children? Therefore, inclusive

schools have to address the needs of all children in every community and the central and state governments have to manage inclusive classrooms. Keeping in view these questions, this article discusses in detail the concept of inclusive education, including importance, challenges and measures to implement inclusive education in India.

Key words: Inclusive Education, Children with special needs, Disabilities, Inclusion

## Introduction

Inclusive education has been defined at various ways that addresses the learning needs of the differently abled children. The efforts of the Government of India over the last five decades have been towards providing comprehensive range of services towards education of children with disabilities. In 1974, the centrally sponsored scheme for Integrated Education for Disabled

Children (IEDC) was introduced to provide equal opportunities to children with disabilities in general schools and facilitate their retention. The government initiatives in the area of inclusive education can be traced back to National Educational Policy, 1986, which recommended, as a goal, 'to integrate the handicapped with the general community at all levels as equal partners, to prepare them for normal growth and to enable them to face life with courage and confidence'. The

World Declaration on Education for All adopted in 1990 gave further boost to the various processes already set in the country. The Rehabilitation Council of India Act 1992 initiated a training programme for the development of professionals to respond to the needs of students with

disabilities. The National Policy for Persons with Disability, 2006, which attempts to clarify the framework under which the state, civil society and private sector must operate in order to ensure a dignified life for persons with disability and support for their caretakers. Most recent advancement is the Right of Children for Free and Compulsory Education (2009) which guarantees right to free and compulsory education to all children between ages six to fourteen. For education for a child with disability, the act has to be read in conjunction with Chapter V of the Persons with Disability Act, 1995. Chapter V of the PWD Act ensures that every child with disability is entitled to a free education up to the age of 18 years. Keeping in view, Govt. of India

had accelerated the new scheme of Inclusive Education to achieve the target of Education for All (EFA) by 2010. Inclusion is an effort to make sure that diverse learner – those with disabilities, different languages and cultures, different homes and family lives, different interests and ways of learning. Inclusive Education denotes that all children irrespective of their strengths and weaknesses will be part of the mainstream education. It is clear that education policy in India has gradually increased the focus on children and adults with special needs, and that inclusive education in regular schools has become a primary policy objective.

## Concept of Inclusive Education

The principle of inclusive education was adopted at the “World Conference on Special Needs Education: Access and Quality” (Salamanca Statement, Spain 1994) and was restated at the World Education Forum (Dakar, Senegal 2000). The Statement solicits governments to give the highest priority to making education systems inclusive and adopt the principle of inclusive education as a matter of policy. The idea of inclusion is further supported by the United Nation’s Standard Rules on Equalization of Opportunities for Person with Disability Proclaiming Participation and equality for all. Inclusive Education (IE) is defined as a process of addressing the diverse needs of all learners by reducing barriers to, and within the learning environment. It means attending the age appropriate class of the child’s local school, with individually tailored support (UNICEF

2007). Inclusive education is a process of strengthening the capacity of the education system to reach out to all learners. At the Jometin World Conference (1990) in Thailand, the goals for 'Education for All' were set and it was proclaimed that every person (child, youth and adult) shall be able to benefit from educational opportunities which would meet their basic learning needs. Inclusion is an educational approach and philosophy that provides all students greater opportunities for academic and social achievement. This includes opportunities to participate in the full range of social, recreational, arts, sports, music, day care and afterschool care, extra-curricular, faith based, and all other activities.

### **Background of the Inclusive Education programme**

The government of India is constitutionally committed to ensuring the right of every child to basic education. The Government of India has created numerous policies around special education since the country independence in 1947. One of the earliest formal initiatives undertaken by the GOI was the Integrated Education for Disabled Children (IEDC) scheme of 1974 (NCERT, 2011). The Kothari Commission (1966) which highlighted the importance of educating children with disabilities during the post-independence period (Pandey 2006). In 1980s

the then ministry of Welfare, Govt. of India, realized the crucial need of an institution to monitor and regulate the HRD programmes in the field of disability rehabilitation. Till 1990s, ninety percent of India estimated 40 million children in the age group- four-sixteen years with physical and mental disabilities are being excluded from mainstream education. The National Policy on Education, 1986 (NPE, 1986), and the Programme of Action (1992) stresses the need for integrating children with special needs with other groups. The Government of India implemented the District Primary Education Project (DPEP) in 1994–95. In late 90s (i.e. in 1997) the philosophy of inclusive education is added in District Primary Education Programme (DPEP).

### **Need and Importance of Inclusive Education**

There have been efforts internationally to include children with disabilities in the educational mainstream. In order to achieve truly inclusive education, we need to think about and incorporate children with special needs into regular schools. Especially, because these kids face some sort of barriers to learning and participation in the classroom. As general education classrooms include more and more diverse students, teachers realize the value of accepting each student as unique. In effective inclusive programs, teachers adapt activities to include all students, even though their individual goals may be different. We have learned that inclusive education is a better way to help all students succeed. Researches show that most students learn and perform better when exposed to the richness of the general education curriculum. The growing body of research has shown that children do better academically when in inclusive settings and Inclusion provides opportunities to develop relationships. Some of the benefits include: friendships, social skills, personal principles, comfort level with people who have special needs, and caring classroom environments.

## **Challenges to implement Inclusive Education in India**

In India the number of the disabled people is so large, their problems so complex, available resources so scarce and social attitudes so damaging. The road to achieving inclusive education is a long and varied one, on which challenges and opportunities will arise. India is a multi-lingual, multi-cultural, multi-religious country, and its people are stratified along sharp socio-economic and caste lines. With an estimated 1,210 million people, India is the world's second most populated country after China. It has 17 percent of the global population and 20 percent of the world's out-of-school children. The aim of inclusion is to bring support to the students. The Government has created numerous policies around special education since the country independence. There could be many challenges for educating children with disabilities in regular classrooms. These challenges could emanate from scarcity of adequate human and material resources, negative attitudes of teachers and community, non-disabled peers and their parents

## **Few measures for implementing Inclusive Education**

Inclusive education helps the disabled child to develop a sense of pride in their work because they actually feel like they accomplished something. We know that Albert Einstein was learning disabled but still managed to become the greatest mind of the 20th century. Educating children with disabilities alongside their non-disabled peers is considered one of the better ways to provide education to the population in India (Shah, 2005, Shah et al., 2014). The Government of India needs to bridge the gaps in their education system to build a strong system of inclusive education in the country. So, there are following measures for better implementation of Inclusive Education in India.

1. The Right to Education (RTE) must apply to all citizens of India. State and central Governments as well as all the other social actors should recognize the importance of a broadened concept of inclusive education that addresses the diverse needs of all learners.
2. A policy of inclusion needs to be implemented in all schools and throughout Indian education system (NCF, 2005). Schools need to become centers that prepare children for life and ensure that all children, especially the differently abled children from marginalized sections, and children in difficult circumstances get the maximum benefit of this critical area of education.
3. The preparation of teachers for rural special education programmes should be planned differently, as the aim of these programmes would be to integrate disabled persons in their own environment and community.
4. As a system, inclusive education should be flexible. Its flexibility must be reflected in the methods and materials used to give these children the widest possible access to the regular curriculum.
5. A school-based support team should develop strategies for the whole school to meet the needs of learners with special educational needs. This team should also be a resource for teachers experiencing problems in their classrooms.
6. The school has the primary responsibility for helping children learn alongside their typically developing peers. An inclusive school must enable education structures, systems and methodologies to meet the needs of all children, particularly those who face the greatest barriers to achieving their right to education.

7. Parents have a right to be involved in all decision-making concerning their child. They should be seen as partners in the education process. Where there is such co-operation, parents have been found to be very important resources for the teachers and the schools.

8. Bringing special children into mainstream requires adjustments that schools need to make in advance. Transport facilities should be altered, so that these children can move around with relative ease. Architecturally, there should be ramps and wheelchair access constructed in service areas such as toilets.

### Conclusion

Right to Education Act 2009 ensures education to all children irrespective of their caste, religion, ability, and so on. It is essential to build an inclusive society through an inclusive approach. In doing so, we have challenged commonly held beliefs and developed a new set of core assumptions. Inclusion is more than a method of educating students with disabilities. It stresses that each child, regardless of the intensity and severity of his or her disabilities, is a valued member of society and is capable of participating in that society. A good inclusive education is one that allows all the students to participate in all aspects of classroom equally or close to equal. To meet the challenges, the involvement and cooperation of educators, parents, and community leaders is vital for the creation of better and more inclusive schools.
