Abstract- A computer virus is software intentionally written to copy itself without the computer owner’s permission and then perform some other action on any system where it resides. Now a days, viruses are being written for almost every computing platform Anti-virus protection is, or should be, an integral part of any Information Systems operation, be it personal or professional. There are number of computer virus are created and these computer virus are affected in day today life. The large number of Anti-virus software available in the market and some are being launched, each one of them offers new features for detecting and eradicating viruses and malware. People frequently change their Anti-virus software according to their liking and needs without evaluating the performance and capabilities of the various Anti-virus software available. This research paper highlights the popular antivirus software in different types of users with types of antivirus software in selected Districts. And investments made by the different types of users with their internet used.

Key words: Network, Virus, Security threats, Attack of Computer Virus, Internet, Investement

I. INTRODUCTION

Now a day’s computers are very essential part of our life. The uses of computer are increased day by day. A computer people can share information from one computer to another computer with the help of device or media. In the current days there are various ways or method for sharing information because people can carry several gigabytes or terabyte of data from one destination to another destination. We also know history and which devices are used to exchange information in the world. There are several ways a user can go about copying data from one computer to another computer. In the process of exchanging the information using communication media there will be a problem of attack of malware or computer virus. A computer virus is a computer program that can spread across computers and networks by making copies of itself, usually without the user’s knowledge. Viruses are capable of displaying different messages, denying all kinds of access, data thefts, changes in valuable data or files, deleting systems or any files, or it disable hardware. Therefore, an early detection and prevention mechanism is very important for the security of the computer. Anti-virus software is a critical link in overall security chain, protecting organization’s computers from many types of virus, including worms and Trojan horses. Using Anti-virus software is a good way to detect viruses and it is advisable to use Anti-virus software on network operating systems and workstations for adequate protection. Anti-virus software is specifically written to defend a system against the threats that malware presents, Anti-virus software may work differently and ranges from large security packages to small programs designed to handle a specific virus.

The large number of Anti-virus software available in the market and some are being launched, each one of them offers new features for detecting and eradicating viruses and malware. Therefore people have a choice of different types of Anti-virus i.e. both in the form of freeware software or licensed software. People frequently change their Anti-virus software according to their liking and needs without evaluating the performance and capabilities of the various Anti-virus software available. Hence there is a need to find parameter for measuring performance of Anti-virus software for finding good and also suitable for the specific needs of the users.

II. WORKING OF ANTI-VIRUS SOFTWARE

Fig 2.1: Prevention from different attack
The use of computers and Internet are increasing day by day for different purposes with more and more users. At the same time these computers and networks are facing number of problems posed by malicious codes like virus, Trojan, etc. The problems which are shown in the above figure [Diagram 2.1: Prevention from different attack] which are Symptoms, Propagation, Trigger Mechanism, Payload, Security, Operating algorithm, Virus types discussed in chapter III. These different problems are analyzed by Anti-virus software programs, which provide solutions for prevention and eradication of computer viruses. [9][10][11]

III. Sample Design

The study aims at collecting data from the users of Anti-virus software. Therefore; invariably all the people using a computer used an Anti-virus software. Sampling Universe – The entire users of computers comprises the universe for the study.

3.1 Criteria for sample selections – A study of data of users of Anti-virus software maintained by various Anti-virus software companies and their vendors, it has revealed that there are broadly 9-10 types of users, mentioned in bellow table no 3.1 [Table No.3.1: Sample size of districts, and Anti-virus Software Users]. Bellow table gives information about district wise Anti-virus software users in Sangli and Kolhapur districts of geographical scope considered for this study. Researcher undertaken study of these users of Anti-virus software, hence only registered user of Anti-virus software are considered for deciding sample and total 574 users out of 2708 are selected as samples.

In this table, 3 out of 31 banks from Sangli district and 5 out of 45 from Kolhapur district are selected as a part of sample for the study.

10 out of 95 coaching classes from Sangli district and 14 out of 135 from Kolhapur district are selected as a part of sample for the study.

13 out of 127 educational institutes from Sangli district and 18 out of 180 from Kolhapur district are selected as a part of sample.

In these selected educational institutes, 10 students from each educational institute are selected as respondents for the study. As for the student category random sampling method was adopted, thus total 310 students are selected as a part of sample size.

13 out of 130 government offices from Sangli district and 25 out of 248 from Kolhapur district are selected as a part of sample.

5 out of 51 Hotels, travel and tourism businesses from Sangli district and 17 out of 180 from Kolhapur district are selected as a part of sample.

11 out of 105 industries from Sangli district and 13 out of 126 from Kolhapur district are selected as a part of sample.

35 out of 345 internet cafes from Sangli district and 37 out of 370 from Kolhapur district are selected as a part of sample.

18 out of 182 professionals from Sangli district and 27 out of 369 from Kolhapur district are selected as a part of sample.

Therefore; the purposive quota sampling method was adopted for sample selection of these user categories.

Table No. 4.1 – Use of Different Anti-virus Software

Fig No. 4.1 – Use of Different Anti-virus Software

Therefore it can be inferred that NPAV [32.93%] and Quick Heal [24.39%] are the most popular Anti-virus software that are being used by the different category of users.

Table No. 4.2 – Investment Made by Different User Types

<table>
<thead>
<tr>
<th>User Type Name</th>
<th>Less Than 1000</th>
<th>1001 to 2500</th>
<th>2501 To 5000</th>
<th>More Than 5000</th>
<th>Grand Total</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Industry</td>
<td>8 [40.0%]</td>
<td>4 [20.00%]</td>
<td>7 [35.00%]</td>
<td>1 [5.00%]</td>
<td>24</td>
</tr>
<tr>
<td>Internet Cafes</td>
<td>37</td>
<td>12 [21.43%]</td>
<td>6 [10.71%]</td>
<td>1 [17.65%]</td>
<td>72</td>
</tr>
<tr>
<td>Professionals</td>
<td>20</td>
<td>13 [65.00%]</td>
<td>9 [45.00%]</td>
<td>0</td>
<td>45</td>
</tr>
<tr>
<td>Students</td>
<td>118</td>
<td>34 [28.97%]</td>
<td>5 [43.10%]</td>
<td>5 [43.10%]</td>
<td>310</td>
</tr>
<tr>
<td>Grand Total</td>
<td>245</td>
<td>81 [33.25%]</td>
<td>11 [45.59%]</td>
<td>3 [12.50%]</td>
<td>574</td>
</tr>
</tbody>
</table>

- From the above table it is clear that, majority of the users invest less than Rs.1000 per year for Anti-virus software.
- Only the bank users [37.50%] invest more than Rs. 2500/- per year for Anti-virus software.

Therefore, it can be inferred that the per year investment in an Anti-virus software in the selected area ranges from Rs. 1000/- to
2500/- per year.

Table No. 4.3 – Use of Internet by Different Users

<table>
<thead>
<tr>
<th>Antivirus Name</th>
<th>Internet</th>
<th>LAN Only</th>
<th>LAN With Internet</th>
<th>Stand Alone Without Internet</th>
<th>Grand Total</th>
</tr>
</thead>

<td>36 [6.62%]</td>
<td></td>
</tr>
<tr>
<td>Hotel and Travel &amp; Tourism Businesses</td>
<td>15 [88.18%]</td>
<td>5 [22.73%]</td>
<td>2 [9.09%]</td>
<td>20 [9.09%]</td>
<td></td>
</tr>
<tr>
<td>Industry</td>
<td>20 [83.33%]</td>
<td>3 [12.00%]</td>
<td>1 [4.17%]</td>
<td>24 [4.18%]</td>
<td></td>
</tr>
<tr>
<td>Internet cafes</td>
<td>14 [19.44%]</td>
<td>59 [80.56%]</td>
<td>72 [12.54%]</td>
<td>79 [12.54%]</td>
<td></td>
</tr>
<tr>
<td>Professionals</td>
<td>41 [81.11%]</td>
<td>4 [8.89%]</td>
<td>45 [7.84%]</td>
<td>45 [7.84%]</td>
<td></td>
</tr>
<tr>
<td>Students</td>
<td>37 [9.09%]</td>
<td>3 [8.09%]</td>
<td>31 [10.30%]</td>
<td>31 [10.30%]</td>
<td></td>
</tr>
<tr>
<td><strong>Grand Total</strong></td>
<td>114 [72.13%]</td>
<td>8 [1.39%]</td>
<td>120 [20.91%]</td>
<td>32 [5.67%]</td>
<td>177 [100%]</td>
</tr>
</tbody>
</table>

From the above table it is clear that majority of Anti-virus software user use Internet. Only 1.39 % of the users are connected through without Internet in LAN and 5.57% of the Anti-virus software is running on standalone machines.

V. HYPOTHESES

Here the factors of variation are different categories

Set up the Hypotheses

\[ H_0 : \mu_1 = \mu_2 \]
\[ H_1 : \mu_1 \neq \mu_2 \]

Null Hypotheses

\( H_0 \) - Investment made in Anti-virus software by different categories of users differ significantly.

Alternative Hypotheses

\( H_1 \) - Investment made in Anti-virus software by different categories of users does not differ significantly.

To test this hypothesis, the One way ANOVA: Two-Factor without Replication test was applied and the results are presented in following table [table No.5.3.3]

Table No 5.1: The result of ANOVA test between investments made by different categories of user.
Table No 5.2: ANOVA: Two-Factor without Replication

<table>
<thead>
<tr>
<th>Source of Variation</th>
<th>SS</th>
<th>df</th>
<th>MS</th>
<th>F</th>
<th>P-value</th>
<th>F crit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rows</td>
<td>2828.8</td>
<td>6</td>
<td>471.46</td>
<td>32.567</td>
<td>0.001782</td>
<td>2.508189</td>
</tr>
<tr>
<td>Columns</td>
<td>3521.6</td>
<td>4</td>
<td>880.39</td>
<td>5.710</td>
<td>0.000015</td>
<td>2.790289</td>
</tr>
<tr>
<td>Error</td>
<td>3511.2</td>
<td>24</td>
<td>146.31</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>11991.6</td>
<td>34</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The critical (Tabulated) value of \( F (v_1 = 14, v_2 = 149) \) D.F. at \( \alpha = 0.05 \) is 1.67. Since the calculated value of the test statistic \( F \) is greater than the table value. The hypothesis is rejected. Hence, there is significant difference between two means. It concludes that, Investment made in Anti-virus software by different categories of users differs significantly.

VI. CONCLUSIONS

The antivirus software objective is to behind the viral protection programs is to secure the system using these 3 tasks: Take preventive measure, Detection of the malicious code, Eradication. There are six different brands of Anti-virus software that are being used by the various categories of users in the selected area. The study reveals that NPAV and Quick Heal are the two most popular Anti-virus software brands being used by different categories of users. However it is also revealed that the Norton brand of Anti-virus software is used by majority of the banks on account of its reliability and dependability for secured transaction on the network. Quick Heal brand of Anti-virus software is being used by majority of the coaching classes, government offices, hotel and travel tourism businesses and the industries. Majority of users of NPAV brand are students, educational institutions and professionals. Investment made in Anti-virus software by different categories of users differs significantly.

VII. ACKNOWLEDGMENTS

The researchers are grateful to the authors, writers, and editors of the books and articles, which have been referred for preparing the presented research paper. It is the duty of researcher to remember their parents whose blessings are always with them.
