

COMPREHENSIVE HISTORICAL PERSPECTIVE ON THE CONTRIBUTION OF TEACHERS AND THE EDUCATIONAL SYSTEM TO BRING ABOUT CHANGES IN THE EDUCATION STRUCTURE OF TAMILNADU

Dr V. Marappan,
Assistant Professor of History,
Loganatha Narayanasamy Government College,
Ponneri,
Thiruvallur District

ABSTRACT

Every profession that impresses people for reason of heart is a profession in which a teacher and the work they do suffer from losing heart. As far as India is concerned, the lessons were taught to the students through the Gurukula education in the homes of the sages in the forest. When the blackboard system came in 1814 it was introduced in Indian classrooms. The classroom system is entirely different in the Indian education system. So the Indians not known the hand practice a long time to this blackboard system. The exams are written online and then the teacher says the answer sheet of those online exams and then gives the marks. Similarly, marks are sent to universities online and their degrees are awarded. The teacher needs to know well about the local situation, which is very intense, to teach the lesson. If the teacher goes to teach the lesson and if the teacher goes to teach the lesson if the teacher goes to teach in the villages it should know about the villages. As per Tamilnadu, it has a diverse ethnic-religious, social and cultural background. Even so, what a teacher needs to land is the basic things that if she is here in a uniform language. The teacher has to be creative because he has to stand in balance and explain. He must be is constructed as well as he must be role model. Actors well and bear guide to subject you reach more because he has to be a driving force for this understanding. Student in a scientific manner, this is even possible in an age where there are so many Technologies. No matter how much a teacher stands in front of the blackboard and teaches with all his energy. The purpose of teachers is to pass on knowledge to students. Because they exists now as a digital resource. Then they taught the lesson by writing on the blackboard as before. Teaching cannot reduce to technique; good teaching comes from the identity and integrity of the teacher.

KEY WORDS

Profession – Gurukula – Teacher - students - Education – Classrooms – Blackboard – Actors – Constructed - Digital resource – Technique – Identity - Integrity – Europeans - English education - Cultures - Communities

Introduction:

Master realized the man became tall and the very day he began to think. Learning and teaching in India is something that cannot be considered as something that came yesterday. It is composed of Monolithic traditional literature, myth and scriptures. There are even going on around the world where promises for language have appeared before many languages have appeared. Similar features appeared in western countries long before universities appeared in the world. But there was a time in India when teachers were revered as deities. These ages were considered to be teachers at the time when the Puranas and the Vedas appeared. It was the sage dynasty that later DTH thought that taught The Princess many tricks but over time that is likely to change.

Teacher teaching has also been forced to adapt to changing times. As far as India is concerned, the lessons were taught to the students through the Gurukula education in the homes of the sages in the forest. The same situation continued until the passage of time and English education. There was an environment where only princes Woodland educated. The biggest changes in the teaching of learning in the education system took place after the arrival of the Europeans. That's when the blackboard system came in 1814 it was introduced in Indian classrooms. The classroom system is entirely different in the Indian education system. So the Indians not known the hand practice a long time to this blackboard system. The blackboard system continued for hundred years gradually began to change after 2000. There have been changes in the teaching of learning since the advent of the computer. It created a new era in the teaching-learning process. This tool was teaching, but their learning and teaching and evaluation method after leaving the subject around is completely changing during this period. This is because so far the teachers have direct contact with the students as well as teachers. the new education system that came after a period in the world, a new education system where the education tolls can contact the students online without the student seeing the teacher and the students without seeing the teachers. During these one and a half years, the admission of students has been going on in the college without the teachers seeing the students. Likewise, there are some of the choices and many more. Exams and assignments are also submitted online. The exams are written online and then the teacher says the answer sheet of those online exams and then gives the marks. Similarly, marks are sent to universities online and their degrees are awarded. This year at a time when

there are overall changes in the teaching and learning features in this situation will be the first learners. Features need to be serious about how to adapt it to this modern age as well. the teacher should have made scientific, physical and psychological products. Teachers need to have the courage to love the work. Similar things are dealt with in this article and while this exchange is going on, the methods of teaching love existed before.

The question now is as to what its status is and there is also a condition that we cannot reach without strength. Here is the situation where the fearless lovers cannot escape. Under the condition in which the one who expresses love really may be dismissed as ignorant here, it is in this article we will look in detail at how attitudes that value as creative freedom as well freedom, equality, Fraternity are going to be in this situation in this situation. Reference to the above learning and teaching as aspects of the charitable endeavour. In this article, we will see in detail whether it is necessary to take this in the future or whether all this is necessary.

The Teacher is a First-Hand Learner:

That teacher needs to know well about the local situation, which is very intense, to teach the lesson. If the teacher goes to teach the lesson and if the teacher goes to teach the lesson if the teacher goes to teach in the villages it should know about the villages. It goes to teach in cities to be aware of the surrounding conditions of these cities. What kind of education can be taught to these people only if they know the environment? What kind of education and teaching these people with educational equipment. There is the ability to pay close attention only to the environment and to approach students with the abilities to be aware of it on the one hand and the other and to have students with their variety of traits and possibilities related to learning education. There should be an appropriate model of learning for the respective students. In India, the teacher has to look at some of the most subtle things when he is just learning the basics.

Because India is a very vast country here in India there is a situation where different cultures and communities are bound by economic conditions. Sona and mint are valued here where the individual education systems required for each state and the teaching methods that teachers teach to their students are changing. If not it would not be right for the educator Atul and its other levels here to take the same level. As per Tamilnadu, it has a diverse ethnic-religious, social and cultural background. Even so, what a teacher needs to land is the basic things that if she is here in a uniform language. So since language is common, we have to go into the matter of teaching students based on that language. Opportunities are available in the world as well as their exploration and discovery. So the first learner first has to make the student have such a place in their mind, the student has to do the process over and over again. After that, the teacher creates the mindset for students to know about the ways

to solve problems. He needs to develop the physical and mental energy to solve problems. When building a house, we should not tell a student how to build a house, but we should tell the student how to build a house. But we should tell the student how to build a house by taking its brick and plastering it with cement mixture. You have to tell him about the brick and what steps to follow to build the house. Only if a teacher has the experience to build a lot of houses to teach how to build a house can you tell the students how to build a house is very intellectual and Depth. Does file there is a very clear instructor in the first level learning he must pay attention to the following things. The teacher must behave in a very compassionate manner towards his learner. as well as to teach him to regard himself as an adult teaching can teach them to any extent even if they are young.

Teachers Rigorous Readers:

The teacher has to be creative because he has to stand in balance and explain. He must be is constructed as well as he must be role model. Actors well and bear guide to subject you reach more because he has to be a driving force for this understanding. The biggest question was asked about the cognitive ability of teachers who read the most books in America and the impact they have had on students. These questions have turned into studies and some results have been obtained based on those studies. Accordingly, it is revealed that the teachers who have developed themselves by reading more have shared their experience better with the students. Teachers who read so much can be seen sharing their experiences clearly and deeply with the students. Teachers who read so much can be seen sharing their experience clearly and deeply with students who MSG from those educated teachers continue to study themselves. It has come to it at the end of the study that they go home and study. Not only that but it has made their costume that among the student which is considered to be the highlight. The more book teacher read the more one can understand and the more one can make others understand. As well as extending that your ability to understand the meaning of what your creator has just read. By studying one can understand the net you of the community as well as improve it greatly so that we can have a continuous conversation in front of the community. Only by studying no one can create on one side in such a way that everyone can accept the identity of an educated person and it can be nurtured. As well as being able to enter and Express itself within the chapter in pedagogic practice. Teachers can create a new young creator by expressing in his educational environment that he is living as his student. Just as it is when 11 is an educated Savage, it is when we engage in discussion with others that those who encounter Talaq with it create the feeling that those who are confronted need to read more and that the educator feature can also create the situation for them to read. But as we discussed at the beginning of this article, now we come to the part where we talk about the middle ground.

Online learning is inevitable today. In the future, this is likely to be the case. New technologies are now being used in this context. Then just to land what it is and how to do it to be nurtured. How to tell it to others that should be clearly defined right now. This is because it is clear that even teachers in developed countries are struggling to make ends meet. But in Tamil Nadu, it is going to happen without your hitch in a few places. Studies show that they are doing a great job online. But this is how online teaching in rural areas does not seem to exist. The online class is conducted conveniently in colleges that are well-developed. But this is not being taken properly in post-college. It is very interesting as a teacher to talk to teachers. Student in a scientific manner, this is even possible in an age where there are so many Technologies. No matter how much a teacher stands in front of the blackboard and teaches with all his energy. It is very easy for students to become distracted. But now the teacher is teaching scientific learning so that we can understand its important concept and take it as it is and tell it to the students in an interesting way. That is, there should be science to understand the meaning of the syllabus and encourage it through teaching.

Importance of Physical and well being of Teachers

A teacher can increase the power of learning by teaching. Teachers who are intent on maximizing energy teachers with specific ambition. They can only do such talk if they have a balance of energy both physically and mentally. When the ambitious teacher gives importance to that goal and their students think of maximizing their energy. PRC will be subjected to excessive pressure and will not be able to function properly due to this pressure. I think students should be in line with his nature as well as education teaching is a sister School subject because 20 percent of teachers are very stressed during their work time. But only 13 % of other entrepreneurs are stressed. The teacher thinks the fact should be revealed. The learner is his wand when he thinks of implementing this he is under immense pressure to turn into a teacher of experience. Modern teaching is taught with much experiential learning. A variety of equipment is used for teaching. Documentaries, animation, museum, National Park, art, and craft with all of this the curriculum teaches students lessons. The new method used by teachers today is to keep students involved to enhance the quality of the students and to ensure that they participate in teaching. A teacher must keep the environment in which he teaches honest. He needs 22 teachings that can make an impact. Students need to make a positive impact and their actual goals.

The purpose of teachers is to pass on knowledge to students. Because they exists now as a digital resource. Then they taught the lesson by writing on the blackboard as before. But in the current digital culture where no-one can be fooled. It is impossible to express that he is uneducated and everyone will know the cutoff.

According to medical studies, two students are exposed to a huge amount of energy. This is because it has been found that levels of the stress hormone are secreted by students. What I learned from this is that it is clear that no matter how tasteful the teachers are, it reaches the students as it is. The students land the lessons only by approaching the teacher very closely. These students are looking at him every day. At this point, the teacher is conducting the lesson under a lot of pressure but its impact is bad. The students Encounter problems encountered outside the classroom. After that is brain health. If teachers are the most important reason for that then teachers are the reason for the overall development of a student. Do teachers need to be fully aware of students' interests as well? This is because teachers need to clearly understand that each student has unique knowledge, pursuits, and ambitions. Teachers do not live up to their expectations as teachers live up to expectations, this puts more pressure on teachers and more on students. Not every student teacher can give importance. But as a teacher as well as making his student a classic student had to give these experiences and thereby bring about changes in his behaviour. The teacher and students must protect themselves. Creative structures that protect and reduce stress. The teacher and student should be healthy and happy. The teacher does not have good health and mental health, PRC will not be able to ensure the completion in half any side teaching event. I should be very happy making plans for nutritious food and doing exercise just like he makes plans for him to study for this. Management for a teacher has 20 up time left for him to go through. At those times we should meditate and benefit them to a great extent. as well as being able to develop knowledge in those times and be physically fit in their health, the hormone in their brain is working half house front slab is being filled in many schools. A job in a positional school is called a psychologist and it is very helpful to reduce stress on students and in most upset teachers. These various sensitization programs are made and its importance is given to everyone and their quotes for class 6th teacher's all about working conditions and how to adapt to them.

Teachers must have the Courage to Love the Work

Every profession that impresses people for reason of heart is a profession in which a teacher and the work they do suffer from losing heart. Like teachers, these people are asking, how can we take our again so that we can give it to others? Which is why they understood their work in the first place. Teaching cannot reduce to technique; good teaching comes from the identity and integrity of the teacher. Please order the conditions teaching have three important Origins. The first to the ordinary place, but the third and most fundamental, is rarely given is true. First, the subject we teach our large and composite life, to our knowledge of, is always defective and partial. No matter how we pursue reading, exploration, teaching requires command of content that

always escapes our grip. s the students we teach for larger than life and even more composite. To see them clearly and see them whole, and the restaurant to them wisely at the moment requires a fusion of Freud and Solomon that some of us attained get teachers instinct are that he can teach well only if the learning energy increases it. it must have come at birth. Teaching is a penance, teaching is a divinity. Everybody says that teaching is a classic thing in the world. So the teaching profession is great only if every teacher dares to dedicate his life to enlighten the students to do that meditation and thus the world will be better.

Method of Teaching Love:

A teacher can use different types to teach love. Before a student comes to the classroom he comes with his body as well as his soul. The incoming student is to examine his body and find how it is. Only e y e comes into it. Only when he comes into the classroom does he know what energy he has and how the world around him is. A teacher needs to realize the world. Children's observation object to the surprise telling him these things can be a learning experience. The teacher should strive to make the student understand everything around what and when where stimulate its instinct. I need to find a new world in the classroom. That he has to create and understand it as a teacher through his own experience. His learning style is to focus and it is even with this created an environment that reflects their interest, learning styles, families, and culture. Children need to develop their plans, Express their feelings, take risks, build choices, and at the same time grow to be strong, thinking individuals. Students' love should start from home. After that, he comes out and students have to get it in college too. Learning is a lifelong process, as well as learning, can help to learn how to lead a satisfying life. After learning knowledge a student conducts a conversation with everyone through those feelings and talent. This knowledge is built as well as love is built for students facing these challenges. Teachers are an integral part of teaching children how to love and it plays a fundamental role in finding a thing if we ask clearly through a cornerstone half classroom environment as well as is learning. Get it should pay close attention to the students while they are discussing and talking to each other. We need to be supportive of each of them and encourage them and we need to absorb and accept their ideas. In situations like this, teachers should be helpful to them from an inspirational point of view. Teachers should give some surprise to the students as they explain the lesson. It tastes deep in the minds of students throughout their lives. That the surprise should be very simple and I made a mistake in solving their problem. Can you help? Ask the student for help this is not a misnomer. Because one is to create to the extent of correcting the mistakes that are the important things. It is also said to be an important

part of the learning process. That last one should be a place where love starts and the learning center should be completely independent. respect should be encouraged.

That effort should be increased by giving it meaning and space. To be an enthusiastic student you have to give that student all sorts of things and encourage and motivate him. When teaching and activity related to this tour and should be given the freedom to pick up any object. The students should be given the freedom to pick up under the handle hall the items in a classroom. Students pick up all the stuff in the classroom. If all the stops like everything went on the signboard, cubbies, signs, word cues, picture, Name and symbol. Give a student a safe place to put his belongings in the classroom and give him a sense of security. He will be safe only if he uses a specific place and keeps the computer and laptop in that place. He can be very simple and very meek. The parents of the school bring him to the classroom and pay half and contribute to the study. Only then will there be a relationship between the children. The teachers and the parents and the relationship that children will reach in the state of mind that they are safe. This is the process of teaching through love. We want to make the place where children study is a wonderful place to work and a place where everyone is welcome and a welcome Centre for learning. Make sure it has all the features. Such as the kitchen block and Library. When looking at home all the photos of that family and friends should be from all of that family as well as create an environment with photos of diversity for all the students in the classroom to create awareness for the children as well. Cooking as well as placing students' books material should have the ability to be maintained with photos etc. as far as the classroom, it should be referred to as a classy family. Arts and crafts photos Maps should be created for students to share all of this. We are in a time of change at a time when the world population was found to be 750 crores. It is no longer possible for schools and colleges to build buildings and seat students in them. We all need to understand this reality. In this situation, there will no longer be an organization called college classrooms. How to give education to students in this situation would have come like online education improving them all in this situation is how teachers prepare themselves for this.

Conclusion:

The world is constantly changing. The job opportunities of parents who send the student to school also come with various changes. The reason is that the environment in which they have to work from home has changed today. This situation today is that those who work in the service sector have to work from home and for those in the industry there are also situations today where you have to operate the machines in factories online from home. How do we transform schools in situations like this? How does modified learning create more and

more knowledge multiplication?. This is the biggest question in the coming period. The answer to this is that it is going to grow into a future education program as well. so in this modern, while many best western countries in United Nations that teaches the students the parents should work together to develop knowledge the world has changed
