

Study the Consumer Behavior of rural area consumer while purchasing online

Dr. Suyog A. Amrutrao
Director,

Department of Management Science, Dr. Babasaheb Ambedkar Marathwada University,
Sub-Campus, Osmanabad. Maharashtra.

Abstract:

India has become a target market for any business organization. The area and population is very big in size. It is always a difficult task to reach all products to last part of market. Online trading is buzz subject in current era. It has many advantages as far as seller and buyers are concern. It affects lot on retail market. Even now days it is effecting big mall also. If we watch on television many advertisement about new online trading are shown. Metro people are very much habitual about online trading. In this research paper researcher would like to know the consumer behavior of rural area consumer while purchasing online in selected area. There are many things can be studied in this paper. Researcher would like to know about there is gap between metro consumer and rural consumer about occupation, frequency of purchase, problems faced during complete transaction, methods used by users for online and other related aspect can be studied.

Index Terms - Trading, Online, Consumer, rural.

Introduction

Online purchasing is boom business. Consumer behavior towards online purchasing is vital. In this study rural consumer are focused to know the point of view of them. It is important to seller to reach all parts of markets. Metro people can buy the things through all means. There are possibilities that rural may have some different view compare to metro consumer. In the metro Malls and various other options are available. This is big challenges as far as rural consumers are concerns. Education, Financial literacy, technological updates are matter to consider. This study will help to know the same status. Respondents are from rural part of Osmanabad District. It is region form Maharashtra.

Methodology

This research is related to Consumer behavior of rural area consumer related to online purchasing in Osmanabad region. 110 respondents from rural area of selected region have selected as respondents. Structured questioners were made and data collected. If there is need interview with rural consumer have taken. Language during data collection and data presentation are changes. Randomly consumers were selected who use online purchasing. Source of data mention in table is survey conducted.

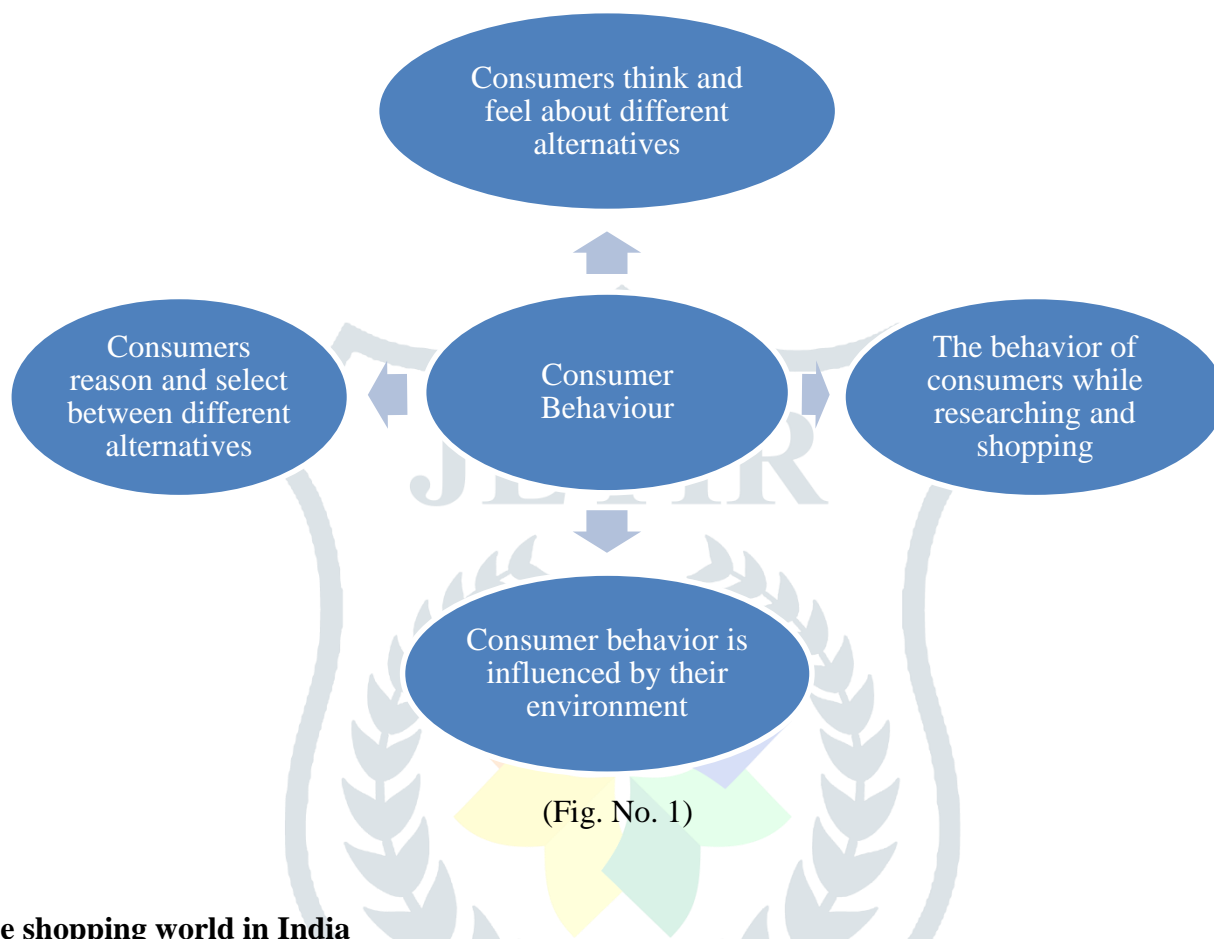

Objectives

To study the Consumer behavior of rural consumer

To find new aspects of rural consumer behavior while online purchasing

To give suggestions in regards to problems faced by consumer in purchasing process

The study of consumer behavior includes

Online shopping world in India

India will have about 500 million Internet users by June 2017. This data is studies by Internet and Mobile Association of India and Indian Market Research Bureau indicate. It is also added that Urban India with an estimated population of 444 million already has 269 million (60 percent) using the Internet and it is good growth.

It is interesting to know that rural part of India with an estimated population of 906 million has only 163 million Internet users hence there are potential approximately 750 million users still in rural India who are yet to become Internet users. From business point of view if they are connected. Over 100 million Indians will have made at least one online purchase.

Cash Payment on delivery	22	20
From other's Debit or Credit Card	15	14
From other's Internet Banking	0	0

(Source of Table No. 1 to 10 is survey)

Discussion

Consumer behavior study of rural consumer is very interesting in Osmanabad rural region. This study was related to online purchasing. Many finding and outcome have come out. Age 20 to 40 people prefer to use online purchasing. Farmer and labor does use mobile and go for online purchasing. Salaried people are limited in rural part. They do prefer self mobile for transaction it also show that they are literate and can multimedia telephone. They are getting latest update regarding new schemes and happing from friends, TV and mobile. Monthly and two monthly is the frequency for the online purchasing. There are multiple option and varieties are available on online purchasing hence most of the respondents prefer to go online. They are finding it very easy for process also. They are finding gap in the digital picture seen while giving order of product and actual delivery of the products. Being a rural area there are limitation for delivery of product

also. Most of private courier services are limited to cities. Amazon and Flipkart are both most preferred platform for online purchasing. Respondents use debit card for payment and few are paying after the delivery of products. It means they are aware about card payment system. They have also given some important suggestion also like delivery, payment and expectation from company. Expectations are collected on preference base. Feedback system should initiate from company to take satisfaction level.

Suggestion

- ✓ Demo show room of product at city level should be available for physically shown purpose not for sale. Customer may visit to get quality and others aspects of product and more information of company and process.
- ✓ Start separate care centre to care rural market which will help for the process and other concern of rural customer. Consumer meet can be started to interact directly with consumer.
- ✓ If any payment issue raise the company should promise to pay return back some percentage of amount to customer after proving its truth.
- ✓ Online Shopping promotion center in form of mobile vehicle will help for promotion in rural area.
- ✓ Negotiation system for price should be available. Company can start yearly discount coupon for regular customer.
