Abstract

As waves of sea, demands for health care have been increasing endlessly, in India there is less food service according its more population growth; its result is impinging in people’s health care issues. Uneven social development will lead to causes intolerable pain to civilians because according its population growth it has to augment its quality medical and health faculties to its people, if so its image of becoming supper power in the international arena could be achieved slowly. In international country’s perceptions India have been functioning and administered along with core principles of secularism and democracy wherein it has to have adequate facilities to deliver to its people for derive all types of progress and facilities. Democracy stands for welfare facilities and common wheel for which it has to work stern to facilitate its people’s life, occupation and business in a healthy ways without worry. People have been living with their own help and work by facing health expenditures, which makes them to be at endless worry because they are unable to get treatment in both private hospitals and private hospitals due to incurring more expenditures. In India around 95% people are below poverty line many of them are being as daily wager and workers such as painter, mason, plumber, scavenger, farmers, due to their pathetic social conditions they are suffocating to spend money for cure their health oriented problems. Most of literate doctors are liking poor must be poorer and rich must be as richer from the sources of poor’s people revenue and income because, in hospitals many private doctors are blindly prescribing unwanted and needless tablets to the patients with an aim to sell their stock tablets for earn money from the patents. At the same time in many of private hospitals patents are looked and treated as an objective and article of marketing and sales materials, instead of looking them as the patents with
sympathetic aspects they are adopting those types of practices. Through such practices they want to earn money for patient’s family with the supports of hospitals managements without sympathy. Once patients are admitted in any hospitals management want to convince them to be at bed for two weeks and three weeks with an interest to manage their hospital’s monthly expenditures, in which nurses are being guided by their management and doctors as to convincing the patients to be at their hospital’s bed without telling proper reasons about their health problems. Nowadays all hospitals workers are being so eager on people getting infected by the diseases with an objective to welcome them to their hospitals for collect money. The nature of doctors are meant to protect patients from the diseases without having any hidden aim and interest because their duty is associated with people’s precious life once they lose that they cannot get back. According India’s rapid population exploitations its infections ratio is also increasing rapidly and speedily without way to stop that. Many of the contemporary M.B.B.S. doctors are intended to earn money through patients at unreasonable ways and injustice ways, instead of palliating patents’ problems they want to increase their problems by giving useless and late working tablets thereby patients are tend to come again and again to hospitals by omitting their survival works and family works. Generally patents are used to wait for doctor’s arrival but they would not worry about patent’s time, health and commitments. Since doctors are not able to understand patent’s commitments and life value they are giving careless treatment thereby they have been coming routinely by stopping and omitting all their family works, by this bad activities of doctors patent’s family have been facing lot of financial crises. So, doctors have to understand background’s of the patients for let them to earn and be with healthy body by giving instant treatment along with help of modern equipments. Though money is important to all the doctors in treating the patients but they have to take care them as their own relatives without neglecting and postponing their treating time with an interest to see and earn money from their waiting and grief.
Key Words: Health, Medications, Fees, Worries, quality

Patient’s Pathetic Situation

Plausibly India is having poor and vulnerable people, by them its power and administrations are developed lot without bother and worry about their health system and facilities. Once their health is infected by any diseases, their work, family expenditures, future of their defendants and sibling’s life are maligned and stunned without rise up. From these hurdles patents have to take care their health at a risky and saddest ways, for which government have to make platform in which they have to work hard and earn lot for meet their all types of expenditures themselves. So far us implemented government’s health oriented policies are being futile and useless instead of this, it may establish working platform nearby poor people’s vilages for encourage them to work in that for meet their future expenditures. Why do this study advisee to government to initiate working platform is to enable the poor people to earn adequately and sufficiently to meet all their future’s problems without grief of no money at their hand. In one way patients are cheated, neglected and surcharged by the hospitals management and in other ways patients are suffering lot without money at their hands for meet their health problems, all these problems were considered as the blunders of the government political administration because it has been functioning without caring and monitoring poor’s people health issues in India contexts. First, all doctors who are working in private and government hospitals have to have sympathetic and mercy thought on patients then they may think about money and fees at reasonable ways, many of patients are threatened by doctors by telling terrible health reasons for their health problems and diseases thereby heart and health of patients becoming further weak and unsound. In brief and short the duties and nature of the all doctors in both private and government are associated with money earning phenomena and mania by which they forget their natural instincts of being as a genuine doctors with morality and ethics in discharging their duties toward curing the patent’s health problems. Most of
poor people in India believe patients are treated poorly in the government hospitals and also treated inhumanly and impolitely by the hospitals workers because where no money is charged form the patients though their health problems were at dangerous situation. Treatment given by public hospital may cure and may not cure but patients will be going again and again by having belief and praying the god one day it will be cured .Though people came across that medications in government hospitals seems so poor and working late they are going repeatedly there since they don’t have money to go to private hospitals. Money making habits of doctors in both private and public hospitals are deterring their natural duties to do toward their fellow being’s welfare. Such their habits violates human being’s health rights without any courtesy and mercy, in terms of patients health problems primarily doctors are seen by all the patients as their life saving god, for which doctors have to have human being natures to cure all types of their health problems without hating them by getting money .According to all doctor’s mindset money is first then treatment is next here no signals of god given humanity natures ,then how patient’s problems would be cured is seeming as a question mark at so many poor people’s hearts .Since government of India is giving free medical service to its people it has bought and stored less quality medicines in its primary health hospitals thereby patient’s problems are not cured easily and rapidly where as private hospitals are giving quality medicines as per it collecting more fees form its patents thereby their health issues are easily solved therefore, private hospitals are earning money and government hospital is lost its money and good will form the patients ,this doubtful health care welfare policies must be abdicated by the Government, instead of that it may serve to its people in a quality way as equal to private hospitals at nominal costs because this method will lead to increase fund to government of India and also patent’s health problems would be instantly solved and cured, its pride will reach to government hospitals then people will start to believe government hospital’s medications than private hospitals. As per people’s views on government
hospital’s services are not good because most of government doctors are owning private clinic and hospitals along with 10 to 25 beds facilities, by which they are not interesting to look and cure patient’s problems in the government hospitals, where name sack medical advice and tablets are given and asked them to come to their private clinic by telling location and name of their hospitals. This types of anti people and anti government sedition are done by the doctors due to careless and commission based polity system, is existing in Indian soil so long with the support of rulers and politicians . Frankly as per this study’s data collection form the public ,all person’s success and growth is made from the sweat of poor people and revenue of toiling community, for them government need not do any service just it may leave them to work independently without exploiting their income through private hospitals .It is well known factors to all the politicians that all government doctors owning private clinic and hospitals ,nearby their locations and hamlet despite none of politicians and authority have not been taken any action ,it is indicating their commission and corruption based administration toward annihilating and destroying the poor people life .

**Conclusion**

Since common people are understood that health checking fees are exorbitant in all the private hospitals they have not willingness to go to that hospitals despite they have had cruel and severe health oriented problems, they are forced to go to private hospitals to save their family by taking good medicines in private hospitals since government hospital’s tablet and medication systems are poor quality and ineffective in curing health problems speedily and easily as private hospital’s medication is doing speedily and effectively. Therefore ,government of India have to revise its late curing and ineffective all types of medications toward replacing new medications as equal to private hospitals’ medications ,needs to instruct government doctor’s skills in treating and curing the patent’s disease as similar to private hospital’s without confusion. In
government hospital there are fixed medication items without altering and inserting new types of medications as private hospitals are doing that one for increase money and patents hospitalization. People in the present periods is liking to get modernized treatment at fixed and genuine cost that will enable them to do their house hold activities soon for earn money and also will lead to hate government’s cost free poor quality medication items. Its medications are destroying poor people’s health and life by believing that it will cure and solve their problems one day .If impossible by government to do above quoted items, it may modernize its medications and doctors skills as to strengthen its name and people life in useful ways.
