## **Abstract**

Other than any subject, role and impact of psychology has been at central place of human being day to day life, its presence is always at all the human being activities because psychology is not an extra force and alienated one from the human beings heart and innate possessions but it was incorporated and infused by god when they born .It was endowed by god to make think human being in a rational ways without ambiguity and suspicion for their bright futures ,altogether psychology is as an inseparable elements of the human being life by making positive and negative works ,in positive work its role has been lot in a constructive ways with an aim to make legible and meaning full life without blurry and dim .According to men input and female's psychology all the activities of both male and female activities are orchestrated along with the directions of the psychology, in this pattern male and female will be used to do lot of activities in similar to their assumption and imaginations, these are the outcomes of the psychology factors which makes them to do good and bad activities ,without role and impact of the psychology nothing work could be done by anyone .Psychology is compositions of imagination, dream ,thoughts and assumptions in this ways and parameters all the fine and unpleased activities are done in the soil and different places due to factors of the psychology .Beyond these explanations it has been as a central processing unit (CPU) of humanbeing works, activities, demeanour and characteristics ,through these the good and bad characters and activities are revealed and exposed by philological aspects. At all the parameters of the human being's actions, activities and performance the role of psychology is being as an integral part of the both positive and negative with an aim to make positive and negative changes and developments according to thoughts of the human beings

**Keywords:** Actions, Synthesised, Integrated, Positive and Health system.

## Introduction

With above said continuation entire gamut of human beings activities are done with an input of psychology, by which human beings are able make all types of work according their interest based on the psychological directions. All the success and victory is coming to human beings according they use and apply their psychological wisdom and thoughts, in this ways it determines all the incoming and outgoing activities of the human being. In Brief without psychology no man is able to perform, functions and live perfectly because which shapes, make shine the human being by giving suitable and relevant knowledge and wisdom according to their needs. Psychology is a fresh air which runs inside of our tissues and vessels and bones, it will be keeping so prosperous and flourishing the face cuts and skins of the human beings if they are satisfied at their fundamental needs unless their face and skin would be wrinkled .The force of psychology is connected with the materialistic point of view which would be realised by human beings through the psychology. The positive psychology is out comes of the humanbeins materialistic possessiveness through which they feel so comfort ,is a positive psychology ,which makes human being tom be at comfortable situations without worry .Here, this research paper argues that good psychology comes through a man has abundant wealth which makes his skin afresh without fade. At the same time a man getting fresh stamina is also generated positive psychology due to the motivation of the psychology ,is playing dynamic role in making and unmaking a man's good life, in this case generally people in society are found so afresh due to force of psychology which they get by their wealth accumulations and savings .In this paper readers are not needed to confuse about this work ,it is written how is psychology is related and connected with human beings well-off and healthy life ,that is generated and made by property possessiveness of human being is fetching fresh air and thinking this thinking is considered psychology which makes skin and healthy of human beings afresh and healthy.

## Psychology is connected with Good health

Commonly psychology is interlinked with health maintenance of human being in following categories .If human beings have property and wealth as they able live without bothering tomorrow life definitely they will get confident in their life that confident is called as appositive psychology, through which they are able to keep good health system along with the help of positive psychology .At the same time human being not having property will lead to keep blaming about their future is called as a negative psychology ,makes damage human being health and put at the look of sorrow

.Here psychology is called assumptions, characters, thoughts and behaviours which determines slowly and speedily the needs and necessities and positives and negatives of the human being life ,their health would be maintained and preserved carefully and happily with the force of positive psychology which they get from their saved amount and property, by which good health system, cultures, life patterns, civilisations and educations are fostered without hindrances . Moneyless situation produces negative psychology in human being life and keeps them at blaming situation and sorrowful conditions without happy ,this unhappy situations are leading to devitalise their health and deteriorate their health systems ,coffin of a man will bring a positive psychology to maintain good and strong health systems in all his life styles .Since 1947 in Indian soil so many people and community is living under the below poverty line without remedial measures because of false administration which produces a sorrowful and negative psychology ,this makes human beings to think about tomorrow survival ,family expenditures and commitments .Definitely good health system of human being is maintained by good psychology is generated by wealth and property of human being unless negative psychology will be proved to destabilised their peace and prosperity without happy .Based on the strength of gathered propriety, ancestor propriety and accumulated property good and positive psychology is emerging out to keep good health system of human beings ,unless human being have property ,savings and wealth their health system is vanished. Materialism determines good and ineffective health system of human beings for which examples are lot found in the soil, the skin and good health system of human being of wealth possessors are different one which might be seen by all the readers, on other hand poor people skin and health systems are seeming so meagre and sympathetic owing their poor situations, based on this evidences health systems of human being is made by good **psychology is caused by money and wealth.**

In many of villages poor people and daily wagers are struggling lot by having pale and maligned health system in terms searching money ,survival and running family, at every moment they are suffering huge on account of not having positive psychology due to lack of money and property. Health is connected with psychology is connected with property these three things are determinant factors of the humanbeings good health system, to maintain their health they need fresh air caused by fresh or positive psychology on account of their property and wealthy life .Once they don't have money nothing positive assumptions, imaginations, thoughts and contemplations would be arsing after that human being will fall prey to gambling, alcohols consumption and chewing banbaracks .

Psychology is same but it is varied from person to person based on their life styles are caused by money and property these psychology is called as a affluent psychology, in poor people life there are suppressive psychology which means keep human being always at suppressive mood without fresh psychology as they are not able to maintain positive good health system. Poor is being much more poor in India by not having positive psychology is derived through money and property therefore they are not able to improve their health and life styles and rich people being more richer than poor with the help of positive psychology is caused by their accumulated property and wealth. The ruling system is conducting the government not to make available fresh or positive psychology to be poor people while they make valuable to rich people for sustain their rich look by generating positive psychology .in simple phrase money gives good psychology ,gives good health system in terms of rich people life whereas money not available in poor people life to get fresh or positive psychology for maintain good health systems ,these are the fault of the rulers ,are intended to generate positive psychology in favour of rich for maintain their good health and life styles whereas they don't like to generate positive psychology in poor people life to maintain their good health system.

## Conclusion

Life styles, education ,social status and political status are differed from person to person like wise good health system also is varied from class to class on account of possessing materialism and capitalism ,without which maintaining good health system is impossible by poor people ,for which government have to come down to motivate positive psychology at poor people life for generate good health system ,definitely which will come through their property and wealth ,to generate and produce these system government and private milliner have to distribute their surplus materials to poor people in order to maintain good health system with the help of psychology. Good feelings are causing good psychology is causing good health system.

For an overall history and discussion of psychological films I suggest the following reading list:

1. Beck, L.F. (1938). A review of sixteen-millimeter films in psychology and allied sciences. *Psychological Bulletin*, 35(3), 127-169.

*This post is written by [Thomas Teo](#), York University and is part of a special series of bibliographies on topics in the history of psychology.*

Adapted from: Teo, T. (2008). Race and psychology. In W. A. Darity (Ed.), *International encyclopedia of the social sciences* (2nd ed.) (Vol. 7, pp. 21-24). Detroit, MI: Macmillan.

Collier, G., Minton, H. L., & Reynolds, G. (1991). *Currents of thought in American social psychology*. New York: Oxford University Press. This book is a good place to start, since it highlights trends in the history of American social psychology. It does not, however, provide much detail or reflection.

Farr, R. M. (1996). *The roots of modern social psychology, 1872-1954*. Oxford: Blackwell. Farr provides a more reflective and critical history, along with a consideration of historiographical issues in writing the history of social psychology.

Greenwood, J. D. (2004). *The disappearance of the social in American social psychology*. Cambridge: Cambridge University Press. Greenwood provides a critical, historical analysis of the individualistic nature of contemporary social psychology. He argues that early twentieth-century social psychologists had a rich conception of the social that has since dissipated. This book is particularly useful because it raises important questions regarding what constitutes a social versus an asocial psychology.
