THE CONCEPT OF GREEN HRM-A REVIEW OF LITERATURE

Sonal Singh Rathi,
Assistant professor and ph.d scholar BVIMR and
Dr. Vikas Nath,
Director and Dean (Academics) and Professor of Marketing at BVIMR

Abstract-Nowadays it seems that a considerable number of organizations practice green human resource management practices in the global context. Exploring and synthesizing about these green HRM practices which are being practiced and are to be practiced by the business and other organizations will contribute significantly to the HRM field academically and practically. In order to achieve and write down this paper, a systematic review of literature is being conducted by using an archival method. This paper employs a methodology to review the articles cited in the databases Sage, Taylor and Francis Online, Springerlink, ScienceDirect, JSTOR, Wiley Online Library, and Emerald with “green HRM or environmental HRM” as the topic. Hence the study for this paper becomes a desk research rather than a survey or any other mode of researching.

Keywords: Green HRM, Review of Literature, HRM

Introduction

Nowadays it seems that a considerable number of organizations practice green human resource management practices in the global context. Exploring and synthesizing about these green HRM practices which are being practiced and are to be practiced by the business and other organizations will contribute significantly to the HRM field academically and practically. Green HRM is an emerging field of research in the organisational studies after 1990s. Due to that, this paper has its focus on exploring green HRM practices from the light of existing theoretical and empirical research works done by the scholars in this field. Hence, the objective of this review is to explore and record green human resource management practices of the organisations based on the existing literature (theoretical as well as empirical).

Presently, existence of green concept in the organization is becoming a standard (Margaretha & Saragih, 2013) as well as in the field of management, the scope of research is increasing day by day on the literature of green marketing, its accounting, environmental management and green human resources management (D. W. Renwick, Redman, & Maguire, 2013). Furthermore, there is developing requirement for the assimilation of green management in the field of human resource which is also called green or environmental human resource (Dutra, 2012; Margaretha & Saragih, 2013). On the other hand, it is noticeable that this field is still on the infancy stage and most of the research studies on green human resource management is still on theoretical stage (Jabbour, 2013). Today, companies are realizing the need of strong grip of social moral sense and responsibilities towards green sense, building brands and having all essential tools for it as it is not the only responsibility, development in other areas is also very necessary for business (Sathyapriya, 2013).

“Being green” is very comprehensive procedure in which organization’s main objective is to reduce cost, creative usage of energy, less waste of viable resources or materials that can be recycled for end products etc. (Jafri, 2015). For the development of green organization, the company and its human resources department should come up with efficient strategies, they should learn to perform the procedure in short time period, utilization of compensation resources should be minimum and creative, unnecessary travelling and spending time in office should be eliminated. Organizations which are supporters of “green” strategies include telecommunication and companies which have flexible work hours (Sathyapriya, 2013). To inaugurate and sustain a “green” concept in the organization we require workers who have interest in eco-friendly issues, therefore the organization should hire people accordingly (D. W. Renwick et al., 2013). To compose green policy, definite objectives should be taken to enhance environmental performance, green management system, to publish the reports of green performance, green coaching and other mode of researching.

Being green” is very comprehensive procedure in which organization’s main objective is to reduce cost, creative usage of energy, less waste of viable resources or materials that can be recycled for end products etc. (Jafri, 2015). For the development of green organization, the company and its human resources department should come up with efficient strategies, they should learn to perform the procedure in short time period, utilization of compensation resources should be minimum and creative, unnecessary travelling and spending time in office should be eliminated. Organizations which are supporters of “green” strategies include telecommunication and companies which have flexible work hours (Sathyapriya, 2013). To inaugurate and sustain a “green” concept in the organization we require workers who have interest in eco-friendly issues, therefore the organization should hire people accordingly (D. W. Renwick et al., 2013). To compose green policy, definite objectives should be taken to enhance environmental performance, green management system, to publish the reports of green performance, green coaching and development of its knowledge, environmental buying guidelines, policy developments required for minimizing the usage of fossil fuel and other unsustainable products (Ramus, 2002). The general reputation of the company improves if its environmental performance is good and also draws attention towards great potential employees. The progress on green theory encourages organization to evolve their worker’s ability to create and synthesize products that closely follow agreement or instructions by green regulations (Chen, 2012). By developing market image, there is higher appealing public reputation, extra efficacy business procedures, better employment, better quality of goods and services, raise in workers work rate, better competitive advantage, more determination and confidence, increase trust of the customers, more motivated employees engaged and committed towards their work due to the embracement of environmental human resource management (D. W. Renwick et al., 2013). Furthermore, Renwick (2013) stated “employee motivation to become involved in environmental activities lags behind that of how organizations develop Green abilities and provide employees with opportunities to be involved in green management organizational efforts” (D. W. Renwick et al., 2013). According to Correa (2013), countless organizations that use green HR management, have gained benefits in many different ways, green policies implementation is beneficial for organization. Their employees are more self-confident and have positive attitude towards their work and firm’s financial performance is improved. Almost each adoption of green guideline.
and principle assist businesses profit by decreasing their unfavourable bad effects on environment and by developing their labour work rate (Delmas & Pekovic, 2013).

**Aim of the Paper**

The main aim of the paper is to underpin the various aspects of green HRM through a thorough review of literature available. In order to achieve and write down this paper, a systematic review of literature is being conducted by using an archival method. This paper employs a methodology to review the articles cited in the databases Sage, Taylor and Francis Online, Springerlink, ScienceDirect, JSTOR, Wiley Online Library, and Emerald with “green HRM or environmental HRM” as the topic. Hence the study for this paper becomes a desk research rather than a survey or any other mode of researching

**Review of Literature - Green HRM**

First this review addresses the meaning and interpretation of green HRM. According to Renwick et al, (2008), the integration of corporate environmental management into human resource management is termed as green HRM. They also stated that human resources aspects of environmental management are green HRM. These scholars broadly specified that distinguished policies in the field of recruitment, performance management and appraisal, training and development, employment relations and pay and reward are considered as powerful tools for aligning employees with an organization’s environmental strategy. According to Jabbour et al, (2010), the „greening” of functional dimensions of human resource management such as job description and analysis, recruitment, selection, training, performance appraisal and rewards is defined as green HRM. In 2011, Jabbour again defined green HRM as “the level of greening of human resource management practices” in terms of functional and competitive dimensions of HRM. Green HRM is referred to “all the activities involved in development, implementation and on-going maintenance of a system that aims at making employees of an organization green. It is the side of HRM that is concerned with transforming normal employees into green employees so as to achieve environmental goals of

the organization and finally to make a significant contribution to environmental sustainability. It refers to the policies, practices and systems that make employees of the organization green for the benefit of the individual, society, natural environment, and the business” (Opatha, 2013; Opatha and Anton Arulrajah, 2014). As far as the above definitions are concerned, the very latest definition provides a comprehensive meaning and understanding about what green HRM is in the context of organisational setting.

HRM practices are the actual human resource programs, processes and techniques that actually get implemented in the organisation or business unit (Gerhart et al, 2000; Huselid and Becker, 2000). Similarly, green HRM practices are the actual green HRM programs, processes and techniques that actually get implemented in the organisations in order to reduce negative environmental impacts or enhance positive environmental impacts of the organisations. The ultimate aim of green HRM practices is to improve the organisation’s sustainable environmental performance.

**Green HRM Practices**

There are functions of HRM which are generally considered as traditional and there can be a variety of green practices under each function. The following section presents summaries of the existing and certain new green HRM practices under each function of green HRM.

**Greenjob design and analysis**

In general, job descriptions can be used to specify anumber of environmental protection related task, duties and responsibilities (Wehrmeyer, 1996; Renwicketal, 2008 and 2013). These days, some companies have incorporated environmental and social tasks, duties and responsibilities as far as possible inach job description to protect the environment. In some companies, each job description includes at least one duty related to environmental protection and also specifically includes environmental responsibilities whenever applicable.

Job descriptions and person (job) specifications may include environmental, social, personal, and technical requirements of the organizations as far as possible. For example, environmental protection duties should be included, along with the allocation of environmental reporting roles and handson safety tasks (Crosbie and Knight, 1995; Wehrmeyer, 1996; North, 1997; Revill, 2000). In addition, some companies use teamwork and cross-functional teams as job design techniques to successfully manage environmental issues of the company (Mayand Flannery, 1995; Florida, 1996; Clement, 1997; Palmer and Andrews, 1997; Beard and Rees, 2000; Griffithsand Petrick, 2001; Daily and Huang, 2001; Govindarajula and Daily, 2004; Jabbour, Santos, and Nagano, 2010). It is because of the reason that environmental protection task forces of companies require order demands multi-disciplinary teamwork.

Nowadays many companies have designated environmental concerning new job positions in order to focus exclusively on environmental management aspects of the organizations. From the perspective of HRM, it is really available initiation and practice to protect the environment. Moreover, some companies have involved designing the existing jobs in a more environmentally friendly manner thereby incorporating environmental centered duties and responsibilities. These are some of the best green HRM practices which can figure out under the functions called green job design and green job analysis.

**HR and Sustainability**

Organizations are increasingly apprehensive with sustainability and corporate social responsibility. The HR function is exceptionally placed to assist in both developing and implementing sustainability strategy. The HR function can provide as a co-worker in formative what is needed or what is achievable in creating corporate values and sustainability strategy.
Green Management: A Green organization is defined as a workplace that is environmentally receptive, resource well-organized and socially responsible. In the environmental writing, the impression of green management for sustainable development has different definitions; all of which normally, look for balance between organizational growth for wealth design and protection the natural environment so that the future making may succeed.

Green Recruitment:
Green recruiting is a system where the focus is given on importance of the environment and making it a major element within the organization. Complementing this, the recruits are also enthusiastic, and to some extent, passionate about working for an environment friendly “green” company. Recruiting candidates with green bend of mind make it easy for firms to induct professionals who are aware with sustainable processes and are already familiar with basics like recycling, conservation, and creating a more logical world.

Green Selection: In the selection context, when making selection for the job vacancies some companies consider candidates environmental concern and interest as selection criteria. When interviewing candidates or evaluating them for selection, environmental related questions are asked by those companies.

Green human resource planning
At present, some companies engage in forecasting number of employees and types of employees, needed to implement corporate environmental management initiatives/programs/activities (e.g. ISO 14001, cleaner production, responsible care etc.). These are good practices some leading companies have adopted to manage their environmental issues. The corporate environmental management initiatives demand some new job positions and specific set of skills. Green human resource planning gets required in this context. In addition these companies engage in deciding strategies to meet the forecasted demand for environmental works (e.g. appointing consultants/experts to perform energy or environmental audits) and sometimes they are outsourcing. As far as existing literature is concerned, it did not clearly specify the practices under the function of green human resource planning.

Green recruitment
In general, environment concerned companies have their own environmental policy framework. In materializing the established environmental policies, companies need environmentally oriented workforce. In creating environmental oriented workforce, companies have two options: First is focusing on green recruitment. Second is providing required environmental protection related awareness, education, training and development to the existing workforce. The first option is more proactive and cost effective than the second option. Hence, searching best green recruitment practices is important to organizations. In the recruitment context, what some companies are doing is that they integrate corporate environmental policy and strategies with the recruitment policy of the company. A survey by the British Carbon Trust confirms that most of the employees (more than 75%) considering employer of choice (Renwick et al, 2008; Jackson et al, 2011) considering working for an organisation perceived it as important that they have an active environmental policy to reduce carbon emissions (Clarke, 2006).

On the other hand, potential employees also search and want to work in the environmental concerned organizations. In United Kingdom environmental issues have an impact on organizations’ recruitment efforts, and according to a survey high-achieving graduates judge the environmental performance and reputation of a company as a criterion for decision- making when applying for job vacancies (Wehrmeyer, 1996; Oates, 1996). The Chartered Institute of Personnel and Development (CIPD) believe in that becoming a green employer may improve employer branding, company image and is a useful way to attract potential employees who have environmental orientation (CIPD, 2007).

Attracting environmentally aware talent might be facilitated by pro-active branding of the organization as a high-quality “green employer of choice” (Renwick et al, 2008; Jackson et al, 2011). Increasingly, firms are beginning to recognize that gaining a reputation as a green employer is an effective way to attract new talent (Phillips, 2007; Stringer, 2009). Really, environmentally responsible employers can attract talent that they needed to implement corporate environmental management initiatives and ultimately it contributes to achieve organization’s environmental goals.

Additionally, in order to attract environmentally concerned people for job vacancies, job advertisements of some companies express certain environmental values (e.g. be a part of the green team of ABC, or we are a socially and environmentally responsible employer) in their job advertisements. Some companies also express their preferences to recruit candidates who have competency and attitudes to participate in corporate environmental management initiatives too. These are some of the green recruitment practices an organisation can have.

Greenselection
In the selection context, when making selection for the job vacancies some companies consider candidates” environmental concern and interest as selection criteria. When interviewing candidates or evaluating them for selection, environmental related questions are asked by those companies (Crosbie and Knight, 1995; Wehrmeyer, 1996; North, 1997; Revill, 2000). Really, these are some of the good green selection practices any organisation can adopt to select environmentally friendly people in addition to normal selection criteria relating to the specific duties of the job being concerned. Selection should considering candidate’s environmental concern and interest as selection criteria. When interviewing candidates or evaluating them for selection, to ask environment related questions and selecting applicants who are sufficiently aware of greening to fill job vacancies. Preference should be given to select applicants who have been engaging in greening as consumers under their private life domain.

Greeninduction
Induction for new employees seems to be needed to ensure they understand and approach their corporate environmental culture in a serious way (Wehrmeyer, 1996). Companies can adopt two approaches in respect of green induction. They are general green
induction and job specific green induction. Some companies practice general green induction. After selecting the candidates for the posts, these companies provide necessary basic information about the corporate environmental management policy, system and practices. In some instances, certain organizations do specific green induction as well to their new recruits. They induct new employees about environmental orientation programs specific to their jobs. In general, these two green induction practices are important for any organization nowadays.

Organizations should ensure that new recruits understand their environmental responsibilities, become familiar with health and safety arrangements, appreciate the corporate environmental culture, adopt the company's environmental policy and practices, and know given relevant contact persons within the organisation (Crosbie and Knight, 1995; Wehrmeyer, 1996; North, 1997; Revill, 2000; Renwick et al, 2008; Renwick et al, 2013).

For new employees seem to be needed to ensure they understand and approach their corporate environmental culture in a serious way. Companies can adopt two approaches in respect of green induction. They are general green induction and job specific green induction. HRM practices under the green induction is to Providing general green induction; Providing job specific green induction; Making new employees familiar with greening efforts of the organization and encourage them to engage in green interpersonal citizenship behaviour.

Green performance evaluation

Measuring employee green performance of job is one of the key functions in green HRM. Without this practice any organisation cannot ensure the realistic environmental performance (firm level) in long term basis. Evaluation of green performance of employee must be done separately or at least as a part of the performance evaluation system of the organisation. The measurement criteria of employee green performance of job must be carefully aligned with the organization’s criteria of environmental performance.

In order to sustain good environmental performance, organizations must establish Environmental Management Information Systems (EMIS) and environmental audits. Many organizations have established environmental management information systems (Wells et al, 1993), and environmental audits (Carpenter, 1994). Schwalm (1994) states that the aim of an environmental management information system is to effectively monitor the large number of pollution, resource usage, energy and regulatory requirements an organisation encounters. Milliman and Clair (1996) state that when an EMIS has been developed, it is important that it is not just used for reporting purposes, but should also be integrated with performance appraisals of managers as well as employees. Incorporating corporate environmental management objectives and targets with the performance evaluation system of the organisation is a must for any organization nowadays. Organizations must include environmental issues as well as environmental incidents, take-up of environmental responsibilities and the success of communicating environmental concerns and policy within the performance evaluation system of the company (Wehrmeyer, 1996).

Installing corporate-wide environmental performance standards is also a must in the green performance evaluation context. Firms like Amoco in the United States (U.S.) have tackled them by installing corporate-wide environmental performance standards (which cover on-site use, waste management, environmental audits, and the reduction of waste) to measure environmental performance standards, and developing green information systems and audits (to gain useful data on managerial environmental performance). The Union Carbide Corporation is a wholly owned subsidiary of The Dow Chemical Company, that includes a green audit programme that contains field audits—which are seen as important, as they can give employees a mechanism by which they can raise any recurring problems, and gain information and feedback on past and future environmental performance of their firm (Milliman and Clair, 1996).

Installing corporate-wide environmental performance standards or establishing green performance indicators into performance management system, and appraisals is not adequate. Communication of green schemes, performance indicators and standards to all levels of staff through performance evaluation system and establishing firm-wide dialogue on green matters are also needed to materialize targeted environmental performance (Renwick et al, 2008; Renwick et al, 2013).

Managers must set green targets, goals and responsibilities for their sections or divisions or departments, they should assess number of green incidents, use of environment responsibility, and successful communication of environmental policy within their scope of their operations (Renwick et al, 2008; Renwick et al, 2013).

For example, some companies have environmental goals (targets) for each employee or group (team) or department or division to achieve in a given period of time. Those companies formally evaluate the extent to which each employee, group (team), department or division has achieved environmental goals (targets). And also supervisors and managers of those companies give regular feedback to the employees or teams to achieve environmental goals or improve their environmental performance. Performance management (PM) is the process by which employees are prompted to enhance their professional skills that help to achieve the organizational goals and objectives in a better way. The recognition of the corporate strategy culminates into the PM. With the EM (Environment Management) affecting global business strategy, PM is also being influenced by the green wave in a possible positive manner.

Green training and development

Providing environmental training to the organizational members (non-managerial employees and managers) to develop required skills and knowledge is an important function of green HRM. This will be helpful to implement corporate environmental management programs of the company (Cook and Seith, 1992). Providing training to encourage recycling and waste management, supporting flexible schedules and telecommuting, and reducing long-distance business travel (Jackson et al, 2011) are very useful to reduce the negative environmental impacts of the organisations.

Creating environmental awareness among the workforce by conducting seminars and workshops at organizational level is also
important to achieve good environmental performance. Providing environmental education that will result in a change of attitude and behaviour among managers and non-managerial employees (North, 1997) is also needed to the organisations. For example, in Fuji Xerox Singapore, every staff goes through eco-awareness training, as well as the sales forces receive education on the green aspects of its product and supplies. Apart from these, some organizations celebrates annual „environmental day” at company/organization level by organizing many competitive programs for non-managerial employees, managers and children of employees. This is also a good practice to inculcate certain key eco-values among the workforce as well as their family members.

Renwick et al. (2008 and 2013) suggest certain green training and development practices such as training staff to produce green analysis of workspace, application of job rotation to train green managers of the future, provision of specific training on environmental management aspects of safety, energy efficiency, waste management, and recycling, development of green personal skills, and re-training of staff losing jobs in relevant polluter industries.

Environmental related education, training and development are key areas of green HRM in an organisation. Without proper education, training and development, materializing targeted environmental performance of a firm is very difficult to achieve. Therefore, it seems that certain companies have actually realized the importance of green education, training and development in their organizational setting.

Nowadays, some companies seriously analyze and identify environmental training needs of employees in order to make them more environmental concerned workforce. Really, these are good practices and also needed to implement corporate environmental management initiatives. Based on environmental training needs analysis of the workforce, these companies conduct serious and systematic education, training and development programs which are given to the employees for the purpose of providing needed knowledge, skills and attitudes for good environmental management. Training and development is a practice that focuses on development of employees’ skills, knowledge and attitudes prevent deterioration of EM-related knowledge, skills, and attitudes. Green training and development educate employees about the value of EM, train them in working methods that conserve energy, reduce waste, diffuse environmental awareness within the organization, and provide opportunity to engage employees in environmental problem-solving.

Green reward management

Green reward management is another key function of green HRM. The sustainability of organization’s environmental performance is highly dependent on the green reward management practices of the organizations. To motivate managers and non-managerial employees on corporate environmental management initiatives, green reward management has significant contributions. Organizations can practice it in two ways such as financial and non-financial. In some companies employees are financially (e.g. incentives, bonuses, cash) rewarded for their good environmental performance. In some other companies, employees are non-financially rewarded (awards/special recognitions/honors/prizes) for their good environmental performance.

Crosbie and Knight (1995) stated that some companies have successfully rewarded extraordinary environmental performance, practices and ideas by including environmental criteria into salary reviews. Due to the scarcity of financial rewards, recognition rewards for environmental performance have been established in many organizations, including Monsanto, Dow Chemical, and ICI Americas Inc, (Whitenight, 1992). The success of recognition rewards relies on the importance of company-wide identification. For example, such attention increases employees’ awareness of environmental achievements (Bhushan and Mackenzie, 1994).

Communicating employee environmental excellence is also a good practice in some organizations. There are many ways in which organizations can communicate their environmental excellence within the organisation. For example, managers at Coors present awards at important meetings to employees who have participated in successful environmental programmes (Woods, 1993).

Having diverse employee environmental performance recognition programs at different levels is also needed for many organizations. The core success of recognition rewards is making them available at different levels within the organisation. For example, Xerox has awarded a number of company-wide environmental teams excellence awards in recognition for developing environmentally-sound packaging, re-use of materials and packaging, and the marketing of recycled paper for Xerox copiers (Bhushan and Mackenzie, 1994). Introducing rewards for innovative environmental initiative/performance reward program is also needed to encourage some creativity and innovation among the workforce. For example, Xerox has also further developed an “Earth Award” that recognises achievements in innovations of waste reduction, re-use and recycling (Bhushan and Mackenzie, 1994). Providing incentives to encourage recycling and waste management, supporting flexible schedules and telecommuting, and reducing long-distance business travel (Jackson et al, 2011) can also be considered as green reward management practices.

Moreover “Pollution Prevention Pays” (For example, 3M has Pollution Prevention Pays program in practice), “Waste Reduction Always Pays” (For example, Dow has Waste Reduction Always Pays program in practice), “Priority One” (For example, Monsanto has this program in waste reduction), and „Save Money and Reduce Toxics” (SMART) at Chevron are some good examples for the company specific green reward management practices (Berry and Randinelli, 1999).

Renwickeleal.(2008)suggestseveralgreenrewardmanagementpractices.They are green pay/reward system,tailor packageforwardgreen skillss,acquisition,useof monetary-based environmentalmanagementrewards (bonuses,cash,premiums),useofnon-monetary based environmentalmanagementrewards (sabbaticals,leave,gifts),useofrecognition-based environmentalmanagementrewards (awards,dinners,publicity,extranormalroles,daily praise), positiverewardsinenvironmental management(feedback),personalrewardplanforallo gaininenvironmentalstewardship/citizenship, linking suggestionschewinrewards system,linking participationinenvironmentalinitiativeswithpromotioncareergains(managersadvancethrough supporting staff/environmentalmanagement),anduseofgreenatbreaks. Rewards and compensation are the major HRM processes through which employees are rewarded for their performance. These HR practices are the most powerful method which links together an individual’s interest to that of the organization’s. We also assert that incentives and rewards can influence employees’ attention to
the maximum at work and motivate them to exert maximum effort on their part to achieve organizational goals.

**Green health and safety management**

The green health and safety management is really beyond the scope of traditional health and safety management function of HRM. It really includes the traditional health and safety management and some more aspects of environmental management of an organisation. That is why nowadays many organizations are redesigning post of “health and safety manager” as “health, safety and environmental manager”. This post includes a wider job scope when compared with traditional post of health and safety manager in an organisation. For example, it includes biodiversity protection and community support initiatives etc. The key role of green health and safety management is to ensure a green workplace for all. Green workplace is defined as a workplace that is environmentally sensitive, resource efficient and socially responsible (SHRM, 2009). At present there are companies where traditional health and safety function was extended to include environmental management/protection. These companies have continually endured to create various environmental related initiatives to reduce employee stress and occupational disease caused by hazardous work environment.

In order to improve health and safety of employees, some companies have really created strategies (e.g. green factory/green zone) to maintain conducive environment to prevent various health problems. These aspects can be considered as some examples for green health and safety management practices of the organizations. Some proactive companies (3M, DuPont, Allied, Signal, Amoco and Monsanto) in environmental management found that management of environment and cost leadership improvements in the health of employees and local communities, enhancing the image of the company as desirable employer and corporate citizen.

**Green employee discipline management**

Wehrmeyer (1996) stated explicitly that green discipline management is a pre-requisite in corporate environmental management. In ensuring green employee behaviour in the workplace, organizations may need green discipline management practices to achieve the environmental management objectives and strategies of the organisation.

In this context, some companies have realized “discipline management” as a tool to self-regulate employees in environmental protection activities of the organisation. These companies have developed a clear set of rules and regulations which imposes regulates employees to be concerned with environmental protection in line with environmental policy of the organisations. In such companies, if an employee violates environmental rules and regulations, disciplinary actions (warning, fining, suspension, etc.) are taken against him/her.

Renwicketal., (2008) indicated that setting penalties for noncompliance on target sein environmental management, discipline or dismissal for environmental management breaches, and developing negative reinforcement in environmental management (criticism, warnings, suspensions for lapses) are also worthwhile practices under the function of green employee discipline management. Incase of rule violations which are not serious, it is a good practice to apply progressive discipline which is a system that progresses from the least severe to the most severe in terms of disciplinary actions/penalties.

**Green employee relations**

The evolution of green HRM has penetrated into the employee relations and union management activities of the organization. In green HRM, employee relations and union support (in a unionized workforce context) are critical in implementing corporate environmental management initiatives and programs. Some companies have strategies (joint consultations, gain sharing, recognizing union as a key stakeholder in environmental management) to get the expected support of trade unions for corporate environmental management initiatives. Really it a good practice to increase firm’s environmental performance.

Renwick et al., (2008 and 2013) suggested certain green employee relations and union management practices. They include employee involvement and participation in green suggestions schemes and problem-solving circles, staff independence of trend experimentation with green ideas, integrating employee involvement and participation into maintenance (cleaning), employee help-line forgiveness of green matters, tailoring green employee involvement schemes to industry/company standards, increasing line supervisor support behaviors in environmental management, union-management negotiating touch green workplace agreements, training of union representatives in respect of environmental management aspects, encouraging employee/employee green forms of transport, set-up organochiefes (including CEO and Board) to increase action in environmental management, and introducing green whistle-blowing and help-lines.

**Conclusion**

Exploring and synthesizing about these green HRM practices which are being practiced and are to be practiced by the business and other organizations will contribute significantly to the HRM field academically and practically. Green HRM is an emerging field of research in the organisational studies after 1990s. Due to that, this paper has its focus on exploring green HRM practices from the light of existing theoretical and empirical research works done by the scholars in this field. Hence, the objective of this review is to explore and record green human resource management practices of the organisations based on the existing literature. It was found that organisations that is environmentally receptive, resource well-organized and socially responsible go green in all the functional area of HRM.
