ABSTRACTS

The Dielectric Antenna has unique attraction for communication community which enables the nanotechnology, nano- devices to controle telemedicinal treatments, IOT, with high impendence bandwidth. Antenna is the one of the key component of any transmitting or receiving devices. So antenna material must have suitable for desire requirement of communicational system with low cost Antenna multi-band or wide –band antennas applications for multiple resonances which have unique capability to full fill our requirement. DRA has unique capability to modify as well as tune it's a reconfigurability of antenna applications. The Dielectric mater have unique quality to preserve electric field. The dielectric Antenna depends up several Parametrical Concepts for DRA antenna designing technique must have Antenna impendence which can be converted to optical frequencies, Dielectrics are playing very important role to design new way fabrication of Antenna for modern communication system, which has so, needful requirement in modern Scientific Applications.

Keywords:- DRA Antenna, bandwidth, Electromagnetic Spectrum, nanoelectronic, optics, Optical Antenna, Radio wave or microwave Antenna theories,

1. INTRODUCTION

The World Communication has defined an which means up and the terms 'ten' which can be say Stretch. The communication Community has used Optical Antenna to Convert Energy for free localizes Propagation [1,2] .This can be Possible only Radio-Wave or Micro-Wave Antenna frequency range[3,4]. Antenna is the one of the key component of any transmitting or receiving devices.The function of light –Emitting devices to enhance its efficiency which play very key role for photovoltaics, Spectroscopy[5,6] .The Dielectric Antenna has great Advantages to Control its directivity. The Optical Antenna Manipulation to improve its bandwidth [7,8].we have proposed very recent and new method which has great Advantages to Enhancement of bandwidth with minimum energy loss[9,10]. The antenna bandwidth enhancement depends upon its Shape, Element, and Materials to make its Perfect condition to Simulated its design for Fabrication of Antenna with low profile making cost [12, 15]. The DRA antenna has Key Applications to provide technology for devices like cellular Phone, televisions which have mostly used in Radio wave or Micro Wave Regime Scale of EM (Electromagnetic Spectrum)[16,19].Now a day's technologist uses Dielectric Antenna in the field of Optics because it has great Advantages to explore it ability for the purpose to establish Radio wave or microwave Antenna theories to develop Communication System with high efficient method to enhance the characteristic of DRA antenna for high permittivity materials[20,22]. In this research article we proposed high efficiency of Antenna to controls its configurability [23, 24] .This research work will be very helpful for future challenges of DRA design as well as benefited to antenna community. The dielectric properties has directly concern with strong system as well as electric and magnetic energy of materials[25] .The dielectric has great Advantage to explain about various Phenomena in electric, nanoelectronic, optics, opto-electronic, physics, solid state physics, biophysics. In the modern approach to dielectric standard model can use to placed on top of DRA Antenna to generate circular polarization field

2. DRA Antenna Range

DRA Antenna has unique ability to effect on metals which has driven by light and also effect on magneto optics. The dielectric antenna has novel application for mobile communication system which can be operated on GHZ, THZ band which has useful for the integration of nanophotonic and nanomagnetism on single chip-level which increases data rate. DRA antenna Networking depends on permittivity of antenna material has great potential to achieved radiation in db- deviation is increased with very less variation patter of antenna.

Fig.1.3.Optical DRA -Enhancement

Fig.1.4 Cylindrical Optical DRA Antenna Model

3. Dielectric Resonator Optical- Antenna for Broad Cast System

Dielectric Resonator Antenna for Broad Cast System has certain limitations for best require Performance to navigate system .The navigation system uses large variety of Radar system which demands high level Antenna system. Performances are evaluated on the basic of its Application Performance for wireless and cellular system.DRA Antenna has unique Capability to fulfil all the requirements of operational communication system. We have used Antenna system for communicate or Transmits Radio signal to one station to another station .The both purpose can be done to use dual pattern diversity of antenna for Body Area Networking which plays an Important role in current Scenarios.

4. Conclusions

We have reviewed several aspects and applications of optical antennas. In particular focused on The Dielectric Antenna Transmit Optical Frequency at nm scale. Dielectric Antenna has great theoretical aspect to design & control communication system for maxima level transmission efficiency. Optical radiation distribution of electromagnetic range of Antenna frequency .The antenna Fabrication methodology concentrates on uses material to fabricate antenna .The simulation of Antenna design works well with Dielectric constant to tune resonance frequency can enable to control its configuration THZ, nm scale , The Dielectric Antenna has unique attraction for communication community which enables the nanotechnology, nano- devices to controle telemedicinal treatments, IOT, with high impedance bandwidth.

5. Acknowledgment

This Research Paper is an outcome of a fellowship sponsored by the Department of Science and Technology (DST), Govt. of India. I am grateful to the Department of Science and Technology, Govt. of India for financially supporting me through the Junior Research Fellowship during this work.

ABOUT AUTHORS

Anand Mohan is working as a Junior Research Fellowship (J.R.F) P.G Dept. of physics C.M.Science College Darbhanga, Bihar, Graduate from Lalit Narayan Mithila University (LNMU) Physics, (Hons). He received the Post Graduate in MSc (Electronic) with Top Ranking (Gold medalist). Medal was given by Hon^{ble} Speaker of LOK SABHA & CHANCELLOR of Central University of Bihar, His research interest include microwave applications, Optical antenna applications, signal processing, Carbon nanotube, Nanoantenna and ultra wideband Applications & wave propagation. He has published numerous research articles in National & International journals and conference proceedings, National seminar & symposium. Article was published in the 6th Bihar Science Conference, 2014 An International Conference on Science & Technology in 2014. He has been honored Young Scientist Award by BHU Varanasi in 2016. He is also the Member in editorial Board of the journal "Asian Journal of Advanced Basic Science. He is also an INSPIRE Fellow from DST, Govt. of India as well as life member of the ISCA, IASC, LASSI, IAPT, IST. He is member of editorial board of green earth research network (GERN) an international journal of all research. He Serve as a advisory board member in many national or international conferences. He is Fellow of International Science Community Association. He is member of editorial board of International Journal of Applied Research, which includes

- The IAENG Society of Artificial Intelligence, Hong Kong.
- The IAENG Society of Computer Science, Hong Kong.
- The IAENG Society of Internet Computing and Web Services, Hong Kong.
- The IAENG Society of Imaging Engineering, Hong Kong.
- The IAENG Society of Information System Engineering, Hong Kong.
- The IAENG Society of Operations Research, Hong Kong.
- The IAENG Society of Scientific Computing, Hong Kong.
- The IAENG Society of Software Engineering, Hong Kong.
- The IAENG Society of Wireless Networks, Hong Kong

Professor (Dr). Ashok Kumar (Born on 20th July .1962)

He did his M.Sc., in Physics with specialization in Electronics and Radio- physics in 1983 from L. N. Mithila University, Darbhanga (Bihar). He joined as a Lecturer in the Department of Physics in MLSM College, Darbhanga in 1985 He has keen interest in research activities. He did his Ph. D degree in 1990 from L. N. Mithila University, Darbhanga in. He has very successfully completed two Minor and one Major research project sponsored by UGC, New Delhi, Presently he is working as Professor in the Department of Physics MLSM College, Darbhanga, Bihar. He has got several research papers published in national and international journals. Several research scholars in faculty of science (Physics) have been awarded Ph.D. degree under his successful guidance and supervision. He is Life member of Laser and Spectroscopy Society of India, Department of Physics, Banaras Hindu University, Varanasi & Indian Association of Physics Teachers, Kanpur. Served as an expert member in the faculty selection committees of various Institutes, he received Indira Gandhi Sudbhavana Award for outstanding achievement in chosen field of activity International Business Council, New Delhi. He is presently a member of the editorial board of the of Airo International Research Journal Which includes IAENG, Hong Kong, bearing membership no. – 179517 dated 21 Nov. 2016 and a member of the following societies:

-the IAENG Society of Artificial Intelligence

- the IAENG Society of Bioinformatics
- the IAENG Society of Chemical Engineering
- the IAENG Society of Computer Science
- the IAENG Society of Data Mining
- the IAENG Society of HIV/AIDS
- the IAENG Society of Internet Computing and Web Services
- the IAENG Society of Imaging Engineering
- the IAENG Society of Industrial Engineering
- the IAENG Society of Mechanical Engineering
- the IAENG Society of Operations Research
- the IAENG Society of Scientific Computing
- the IAENG Society of Software Engineering
- the IAENG Society of Wireless Networks
