Abstract

Astrology is an ancient art that based on Hindu religious scriptures. The movement and positions of celestial bodies can have a profound impact on our love life, work life, and everything in between. A major part of Astrology is using the movements (transits) and relationships (aspects) of the planets to forecast what will be happening in our lives. It is believed that each zodiac sign and planet is connected to the body’s parts and functions. Medical astrology is an ancient medical system that associates various parts of the body, diseases, and drugs as under the influence of the sun, moon, and planets, along with the twelve astrological signs. It searches the mysteries of the possibilities of diseases that are likely to occur in the future.

This study has tried to show the interconnection between medical and astrological science to clarify how the planets are responsible for cancer in the person. It also displays the relationship between the medical astrology with oral cancer.

The random sampling of the individuals visited hospital for diagnosis, therapeutic and prognostic purpose of oral cancer were included in this study. Total ten oral cancer treating individuals were selected for the kundali (birth chart). The kundali was prepared on the date and the time of birth of the cancer patients recorded by themselves and their relatives. The preparation of kundali, mainly Lagna Kundali, was based on the calendar issued by the Nepal Panchanga Nirmak Committee.

Medical astrological analysis showed the effect of sinful planet to causal planet and relevant organs are likelihood of oral cancer. Hence, it is better to include the Medical astrology in modern healthcare system to take prevention against oral cancer.

Key Words: Celestial Bodies, Incidence, Medical astrology, Oral cancer

I. Introduction

Cancer is a group of disease characterized by uncontrolled, growth, invasion and spread (Metastasis) of abnormal cells. In cancer, normal mechanism of control of growth and cell division are disturbed. Cancer is synonymous with the term "malignant tumor". Cancer one of the common and most important non-communicable disease increasing around the world with marked rise in the least developed parts of the world. Preventing cancer is an important scientific and public health goal of this century. Cancer is becoming a growing public health problem in our country too. The global cancer burden is estimated to have risen to 18.1 million new cases and 9.6 million deaths in 2018.

Globally, about 1 in 6 deaths is due to cancer. Approximately 70% of deaths from cancer occur in low- and middle-income countries. (GLOBO CAN
Asia accounts for 60% of the world population and half the global burden of cancer. The incidence of cancer cases is estimated to increase from 6.1 million in 2008 to 10.6 million in 2030. According to WHO, India has a cancer mortality rate of 79 per 100,000 deaths and accounts for over 6 percent of total deaths. These numbers are very close to those of high-income countries.

Oral cancer, also known as mouth cancer, is cancer of the lining of the lips, mouth, or upper throat. In the mouth, it most commonly starts as a painless white patch, that thickens, develops red patches, an ulcer, and continues to grow. When on the lips, it commonly looks like a persistent crusting ulcer that does not heal, and slowly grows. Other symptoms may include difficult or painful swallowing, new lumps or lumps in the neck, a swelling in the mouth, or a feeling of numbness in the mouth or lips.

In 2018, oral cancer occurred globally in about 355,000 people, and resulted in 177,000 deaths. Between 1999 and 2015 in the United States, the rate of oral cancer increased 6% (from 10.9 to 11.6 per 100,000). Deaths from oral cancer during this time deceased 7% (from 2.7 to 2.5 per 100,000).

Oral cancer, which includes cancers of the lips, tongue, cheeks, floor of the mouth, hard and soft palate, sinuses, and pharynx (throat), can be life threatening if not diagnosed and treated early.

Cancer of the oral cavity (Oral cancer) is the 11th most common malignancy in the world, despite the general global trend of a slight decrease in the incidence of oral cancer, tongue cancer incidence is increasing. About 90% of tumors are sub typed to oral Squamous cell carcinoma (OSCC). The incidence and mortality of this tumor shows variability according to the geographic location in which it is diagnosed, however in the last decade an increase was seen in the percentage of young patients, especially patients with tongue cancer.

In Nepal 2015, total 9718 new cancer cases were reported by hospital based national cancer registration programme. Whereas, 471 (4.84%) were oral cancer (C00 - C06), which was only 135 (4.3%) out of 3251 cases in 2003. Similarly, 455 (5.2%) and 500 (5.5%) cases of oral cancer were diagnosed for 2013 and 2014. It shows

In recent days, the observation of the data of the oral cancer shows its increasing condition. Even in Nepal, the oral cancer is giving to increasing rapidly. According to the medical science, the tobacco use, poor hygiene, alcohol, HPV infection are its major factors. In this regard, the celestial planets are thought to influences the human body. Some research, too, shows the planets responsible to grow the cancer in the human body (Subedi et al. Medical & Astrological Study on the Impact of Celestial Bodies for Cancer-Susceptibility-A Case Study, Journal of Emerging Technologies and Innovative Research (JETIR) www.jetir.org, Volume 6, Issue 6 , June 2019) Therefore, this study exhibits the relation for oral cancer incidence.

Every human bodily organs have their own causal-planet system. According to the nature of that planet, the disease, too, comes to occur when the native is susceptible to any kind of the disease. If any is susceptible to the cancer and is exposed to any other cancer-risk-factor, then possibility of the cancer seems to be there.

Oral cancer incidence doesn't mean that only one bodily cancer but it covers the lip, mouth, palate, gum, and above all the cavity along with the other unspecified sides.

According to the Vedic astrology, the second house of the kundali, the Brish rashi and Lord of the brish-Rashi is the Venus which is the causal factor of the mouth and oral cavity, on condition of the influence of the sinful planets and the Venus, being weak and tortured by the sinful planets, the Natives is susceptible to the oral cancer.

At present / Now-a days, oral cancer disease is increasing per day. The main factors of cancer increase are considered to be the use of tobacco, poor hygiene, environmental pollution, alcohol, betel, paan-supari, HPV-infection. The research
done in the past shows the cancer causal-factors that one of the planets. This study have done regarding epidemiological concern, tries to display astrological risk factors and the connection of oral cancer and the astrological views.

II. Materials and Methods

In this study, random sampling collection of horoscopes birth date, location and time is made. The position of the planets in the horoscopes, the Yukti, situation, Drishti, planet's Kartari, strength of the planets has been detected and the major factors of kalpurusha Kundali are comparatively concluded on the basis of the different horoscopes.

III. Limitation of the study

This study has the inclusion of random sampling of the ten persons having oral cancer.

The random sampling of the ten individuals visited hospital for oral cancer treatment was selected for the study. By taking informed consent, the Kundali was prepared on the date and the time of birth of the cancer patients recorded by themselves.

IV. Result

This study explains the ten cases based on the Lagna Kundali (Birth-chart) through the interaction made on the head and neck cancer - patients and their horoscopes are made to identify the case on the main point of the position of the Planets which influence the birth.

V. Discussion

As per astrological risk factor analysis, every human bodily organs have their own causal-planet system. According to the nature of that planet, the disease, too, comes to occur when the native is susceptible to any kind of the disease.

According to the Vedic astrology, the second house of the kundali, the Brish rash (Taurus) and Lord of the Brish- Rashi is the Venus which is the causal factor of the mouth and oral cavity, on condition of the influence of the sinful planets and the Venus, Taurus or causal-planets of relevant parts of oral cavity being weak and tortured by the sinful planets, the Natives is susceptible to the oral cancer.

Oral cancer incidence doesn't mean that only one bodily cancer but it covers the lip, mouth, palate, gum, and above all the cavity along with the other unspecified sides.

Every human bodily organ have their own causal-planet system. According to the nature of that planet, the disease, too, comes to occur when the native is susceptible to any kind of the disease.

VI. Conclusion

Medical astrological analysis showed the effect of sinful planet to causal planet and relevant organs are likelihood of oral cancer. Hence, it is better to include the Medical astrology in modern healthcare system to take prevention against oral cancer.
