Abstract

In the contemporary period India has been shining with lot of techniques, technology, method and formula toward improving social and political developments. In which, role of e governance was observed very significant in the developments of all social, economical and political phenomena of India’s development. Though India has been achieving several successes in its economic sectors in the present context but the significant changes were achieved after 1980 and 1990 because of economic improvements and developments which were accelerated to do all the successful phenomena. Due to reason of rapid functions of e governance in India its major goal, future agenda and sustaining present economic growth was able to do. E governance is weapon it will penetrate at all level functions of administration’s activities with its dynamic force for make an effective administration and developments in all the public and private sector’s developments. Due to effective role India’s policy makers, economists, rulers and information technology workers India was able to make changes in entire government as well as private organisation and administration .organisation, industry and administrations were operated by manual labours were replaced by e governance system with an aim to improve active and dynamic improvements in both private and public enterprises across the India. Since introduction of e governance operating and administrative system in India’s all government offices, ninety present of manual works were reduced as one percentage, remaining 99 percentages works are accomplished by e governance system in a systematic and digital ways for the holistic development of India. Through this system merely one percentage works have been done by manual workers so perfectly across the India and this system makes everyone as accountable as answerable to their higher authority without escaping and avoiding from doing their natural e governance works.
Keywords - governance, Improvements, Economy development, Digital process

Introduction

Basically e governance is a systematic digital informative and technology oriented governing and administrative systems of the Indian government, which is used and applied at all the fields and administrations of its government functions. Its role and activities are producing valuable changes and improvements in the social, political and economical fields. Thereby, social developments are caused lot and also made easy to people traces all types of government and economic news in a quick way without delay, e governance has been one of the significant and important device of the informative and communication technology in all country’s political, social and economic developmental activities thereby, all above mentioned developments are happening speedily ,actively and shortly in productive and efficient ways for add value to the rulers, policy makers and policy followers. In this aspects trade, exports, commerce, business and foreign exchange activities are flourishing lot and multiplying huge with an aim to achieve several goals in international competitive platform. Its role and functions in the different dimensions and routs are being highly helpful to the countries in all in all development activities. As to it has been making lot of success in social and cultural developments so many countries are commenced to strengthen their e governance system as to improve their vital areas of social, economical and political structures.

Before three decades, all work and performance of the human beings at both government and private offices were don so slow and suffered lack of communications technology and computerized atmosphere but after e governance was introduced in entire India’s administrative fields human being’s massive lazy works were reduced, their dependency was completely palliated and computerized work was quickened to achieve social and economic developments. All these changes were emerged with an advent of e governance arrival at all the places of government and non government administrations. Previously working nature of human being at different offices at government and private were seeming and becoming very slow with lot time passing natures and interest to do personal works at office time .To reduce all these unproductive and useless nature of work styles of private and public enterprise’s employees, government with collaboration of technological board has been brought and
introduced e governance system to advance and accelerate all types of works in achieving of India’s goal to become super power. Before computerization and e governs introduction India has been facing lot and massive problems in developing of its economic, social, technological and agricultural sectors, for which the lazy and time passing work mined employees were major reasons thereby, development in all the fields were questionmarks.

To break up these hurdles and hindrances which are made by government and private sector’s employees, Indian government with serious concern in strengthening of its social, economical, political and administrative sectors have paid much attentions on introducing of e governance system. Thereafter, e governance was initiated along with bright features of the informative and communication technology with an aim to make splendid developments in the economic developments, social developments and political developments. The major task of government at introduction of e governance is easing of physical work of human beings, completing all official works instantly, reducing time consumption, preventing time wasting and finishing all works instantly.

All these special and outstanding features of the e governance was invented by IT department and CIT for the ameliorations of military, police, governance, commerce, trade, economic, political and social developments. Different types of e governance method of administration was established and introduced in different countries at different styles for the benefit of the civil society without confusions. Now day’s citizens in all the regions and countries with the help of e governance system is able to order and buy food items, articles, goods, cosmetics, household items, iron items and other social needs of the society and families rapidly without delay and late. Due to an effective contributions and functions of the e governance administrative system particularly trade, commerce, imports, exports, transactions, hotels, banking, marketing, house keepings, investments, revenue making, money circulating, debiting, crediting, subsidy, loan dispersing, checking balance of bank account, money transfer from mobile to bank and bank to mobile, online purchase, depositing cash and business solutions shall be able to do easily and conveniently.

**Impacts of e governance in economic development**

Proudly and eagerly a country would be liking to advance, develop and strengthen its economic image and structure, for which it will work lot and hard, in this way an
The invention of e-governance system in India has been making several ever thinkable and commendable developments in the fields of social, economical, political and information technology. Thereby, India today has been functioning and shining in the middle of global politics along with so many proud and famous which were endowed by its e-governance administration as never before in its history. With its economic development supports now it is able to challenge to its opposite country without fear and panic in determining of international issues. Through the supports of e-governance and economic development its international respects have been developing lot as equal as even to China, America and Russia. E-governance’s basic encouragements to India have been motivating to stand at international political race with bold, steady and fearlessly without cowardice proclivity. Since economic development is determining all the features and programmes of a country India worked lot to introduce and initiate e-governance system to boost and develop its economic platform in a cemented method.

By e-governance system, all the needs of a country and people were able to achieve and deliver by India in a stated way without any deviations, with an assistance of an advanced e-governance system Indian government and rulers have been able to carry out their constitutional duties in terms of managing country’s issues, developing people life, nurturing of both private and public sector’s economic developments and also disseminating its all the government news and affairs to the knowledge of citizens. On behalf of government, e-governance has been broadcasting, expressing, disseminating and revealing all government’s news and issues to the people through via of computer, telecommunication, fax, smart phone and other waves oriented methods. Apart from quoted things it is paying many attentions on international political interactions, imports, exports, order making, negotiation, and conversation with several clients as to improve income and economic status of all the countries. In this process, India also is able to march dynamically and successfully in international and global politics to achieve its goal and status I equal to western country’s economy.

E-governance roles are classified into four categories such as:
- Government-to-Citizens
- Government to Government-to (G2G)
- Government-to-Business (G2B)
- Government-to-Employee (G2E)
Government to Citizens

E-Governance passes significant communication, information and messages of government to the knowledge of citizens through e governance process in each and every day. Makes people to get awareness as to how to access government benefits, schemes, polices, programmes and privileges .In other hand it makes people to participate in all government affairs, guiding them to know day today news of the government, disseminating implemented and published gazettes to the people's knowledge and distributing all the governmental welfare schemes to rural and urban areas without bias and partiality. Governments to citizens all information and communications are transferred and shared through e governance system.

It is a channel, medium of flowing and sharing of news, order, law, policy and assignments are materialized between government and citizens and from government to citizens vice versa. Since India has federal type of administration it has to pass properly all the political, economical and political official communications to its state governments without bias and failure, in doing or carry out these duties e governance has been playing much significant and important role.

Government to Business

Rationally people and private sectors in India have to defend on central government assistance for their life and industry development activities. In this paradigm e governance is used to broadcast and carry out all governmental business and commerce oriented news and plans to the private sector's administration. It helps to them in lot of ways to improve their business strategy and commerce method according to government policies and procedures. E governance has been doing its marvelous supports to boost and strengthen the private sectors and public sectors’ goods, manufacturing items finance, international market, orders requirements, transactions, and labor and salary credits. As to strengthen these fields central government have been initiating several commerce and trade oriented policies with an interest to reveal and reach to private and public administrators via e governance system.

Government to employee

Regarding to bonus, promotion, occupations, human resource hiring, salary, regulations of jobs, duties and responsibility, issuing circular, letters, communications and information would be provided by the state and central government through the e governance system is called as a computerized administration .It makes relationships
between government to employees in terms of getting positive developments as well as receiving information as to their job and survival developments.

Before computerization the nature of human beings in working places of both private and public sectors were seeming to be abominable and detestable because, most of them have had laziness and entertainment activities therbu fiancé and non fiancé sectors were not able to touch its desired goals therefore, e governance system was introduced at all level administration of central and state government with an aim to enlarge business, trade, commerce and other ingredient works of government and nongovernmental sectors. During that time India had been facing spoiling administrative system due to lazy and indolent natures of workers at level administration, to overcome and overthrow their nature’s government surprisingly introduced e governance system to activate and energies all lazy minded works

**Conclusion**

As Challenges to nature of worker’s time consuming and time passing, an innovative and inevitable e governance digital system was introduced in Indian administrative system. This system has created much more responsibility in each and every workers of private and public sector’s employee’s as to work sincerely and dedicated for the welfare of company, family and country, altogether India could be strengthened by doing these types of dedicated and honesty works. Regarding to business, commerce, administration, trade and skills development e governance has been as one of the an indispensable tool and part in each and every activities of both private and public sector’s administration. Thereby, success, victory, developments and modernisation have been coming to Indian administration and administrators every day from the sources of commerce, business, trade, import, exports, and politics, military and social developments. All these aggregate success and developments in the aggregate fields were attained by India through the e governance system, which must be further strengthened by Indian government to do vibrant activities in the telecommunication and technological fields for improve its vital powers in the international scene.
