A CASE OF AUTISTIC CHILD

Author details : Dr krupa D Gajjar Contact

Designation : Homoeopathic Medicine PG scholar (PART-1) Department: Homoeopathic materia medica

College : B.G garaiya homoeopathic medical college ,Rajkot

CHIEF COMPLAINTS: Patient consulted for cough cold and fever in acute state. He had a history of recurring Bronchitis for 6 months which was not getting cured by allopathic treatment. During which parents mentioned behavior troubles and where confused and agitated as they were not able to understand why he is suffering and what is the exact diagnosis whether Autism, ADHD or speech disorder.

Analysis of chief complaints:

LOCATION	SENSATION	MODALITIES	CONCOMITANTS
Respiratory system Bronchitis Since 6 months O : sudden D: 6 months P: infrequent	Wheezing Breathlessness Fatigue Coughing Yellow expectorations Sore throat	> warm water+3 < change of weather+3 < cold air+3	Restlessness+3 Irritability+3 Hyperactive+3

Physical history

APPETITE:- Decreased during any illness

THIRST:- Ambiguous - one glass at a time frequently but no while meal
DESIRE:- chocolate+3,ice cream+3,salt+2,milk+2,potatoes+1,apple+1
AVERSION:- papaya+3,eggs+3

URINE:- Normal

STOOL:- Has to strain while passing+3,passes in small quantity

THERMAL REACTION:- Hot

SLEEP:- Cries during sleep,occasionally talks in sleep

PERSPIRATION:- Profuse +3 on scalp,wets pillow on side parts laid on

ADDICTION:- Not any

LIFE SPACE:

Patient consulted for cough ,cold and fever in acute state. he had history of recurring Bronchitis in 6 months which was not getting cured by allopathic treatment. during which parents mentioned about behaviour troubles and where confused and agitated as they were not able to understand why is he suffering and what is exact diagnosis weather Autism ,ADHD or speech disorder. during interview for acute and chronic case taking typical behaviour was observed. child lie down on floor and starts playing. he does not respond to his name and particularly response to parents especially mother. he makes continuous stereotype movements with fingers and showing numbers.he does not make eye contact in front of consultant. Before birth of patient mother lived in a nuclear family. she was attachment+3 to father. pampered +3 by parents. she was perfect in every role at school ,at home and she was never scolded by anyone and never restricted for anythings by parents. they had an arranged marriage in 2015 .after marriage husband lived separately for a year in a village. which he had his job .during which wife was staying with in laws.as with her mother in law and father in law .mother in law dominating + 3 ,out spoken + 3 ,horse + 3. Mother in law used to insult her every time in front of everyone with no definite reason.mother was sensitive + 3 to rudeness .she feels no one has scolded me till now and now suddenly this was too much feels like humiliated. she did not like mother in laws behaviour but never speaks anything to her as she feels if I will say anything she will get hurt and I don't like hurting anyone and so she weeping whenever anyone says her anything. she use to feel constant threat that what if she will make any mistakes after marriage. she was the only daughter in law in house so she has to fulfill all the responsibilities with this. she felt restricted +3. She feels “esi hi life hai marriage Ke Baad Itna stress?”

Husband was caring but irritable,obstinate but supportive. had good relation with him. they had no specific planning for pregnancy. Jab Bhi Hoga tab we will accept. but they had plan for only single child. they had difficulty in conceiving child. so mother in law used to taunting her every time. whenever she gets into menses mother felt humiliated.cries sometimes but husband was supportive.letter on they shifted to another city as husband got transfer over here in 2017. mother's father died. suddenly it was shocking news for mother.she use to feel stress+ 3 for mother and younger brother as who will take responsibility of them. because patient was shifted to another city with husband. during that period after that she used to head a dreams of father where in he said “don't cry I am here with you” soon after that within 15-30 days she conceived so she believes wo mere papa hi hai. during pregnancy there were thoughts of anxious because mother in law strongly wanted a male child. patient use to have fear ,anxiety that if I will not have a mail child again there will be a problem with inter personal relationship of mother in law but letter on she used to feel much confident as she think father came in my dream and as he said I am with you I am come back to you so I believed firmly that father will not disappoint me. I will definitely have a mail child. during 7th month of pregnancy she is shifted to mother's house and had spent good time over here .during that time got hypertension.during 7th month due to increase the weight she was afraid + 3 of normal labour. so she went through LSCS. after birth of child in 2017 she has good relationship with mother in law. also during birth of child he had history of delayed crying and was shifted to ICU for a few time but later on things were normal. he(pt) used to respond to everyone initially. all milestones where a bit delayed at 5 months of age of child. they shifted to another city in 2020.during which due to pandemic mother was anxious+ 3, fearful + 3 and over possessive for child .she did not allow her child to go out or play with anyone and so kept him busy continuously in mobile. in June 2021 they got shifted to another city.in July 21 he(pt) suffered from severe infection due to his abnormal behaviour related to autism. as a person he is obstinate + 3, cries + 3. if he does not get what he wants so lies down on floor if it is not given. he loves to play in open space. Likes swings + 3. at home his miss behaviour increases while out he behaves well + 3. likes playing with dogs, pigeons. get angry and becomes violent. he has fear+2 of heights. does not jump from height.he has never ever eaten by self as well his demands are full filled by mother. mother is over caring+ 3 and over possessive + 3 for child.she has not allowed to taking him for any initiative. sometimes he wips + 3 without any reason.likes soft music when in anger.if soft music is played he calms down. he has love + 3 for numbers. restlessness + 3 fastidious+2. wants washroom to be clean.now he is able to recognise emotions of mother after ABG therapy. he still passes stool in penty.

PAST HISTORY:

Excessive crying during birth.Lactation is difficult sometimes so I have to give up on formula milk.
