## ABSTRACT

This study will contribute to a decision on the securities market, and has been involved with. This study will identify the causes, directly or indirectly, in the securities market, especially for some of the students who have an interest in a new investment or market information that affects the market. The aim of the subject to contribute to the future of the market is the search for information and resources. Shares of the contribution, maybe volatile stocks and stock prices are all factors influencing the market, but some analysts say that the high volatility of the range of investments. This, of course, to review your income and the distribution is difficult, you cannot control. The price of this stock is a little upset, so we are happy with the business, cash flow. Prices can be addressed in some way; there is a good chance that the low prices, depreciation, and investments had little or no impact.

## 1. INTRODUCTION:

The securities market, the company is a preferred primary and secondary market for capital investments and investments are long-term investments. In the primary market of new contributors engage with. Foreign securities traded in the secondary market, often known as stock trading or stock. You can contribute to the secondary market to buy or sell safely. Total sales of joint ventures to succeed for irrigation will contribute to active and viable market capitalism. Economic status is determined by the growth of the securities market. India's finance costs are a growing industry. The main reason why India can be described as one of the world's strongest

economies, as a result, the contribution of foreign and national interest in the Indian market was selected for the research subjects, "securities market" and the substance properties to contribute to the sale of shares and customers will return to the market to buy. The land on which buyers and sellers, the price at which market forces (i. equipment and is determined by the demand for certain goods). We will better understand how to determine the values of the market, and give an example. ABC Co. The industry is very pleased with the confidence to contribute, and there is competition for the expected price movement. Although many people (that is, the proportion of high demand), and too few people to sell this product to the current market price (ie, less supply) can be bought. Similarly, the purchaser ABC Co. the retailer will assess the price of shares of industrial demand and offers a very high price for this, on the other hand, if the stockbrokers, added (that is, more and more demand in the market), ABC Co. and prices fall. During the first days, the buyers and sellers attracted to the business park, but now with its military, and many companies are not available and the price. Entry fee will be charged on the sales and service in your home, or can be sold by phone or online.

## OBJECTIVES OF THE STUDY

Based on all the studies mentioned specific goals. The goal of each topic is the framework decision. The main objective of this study is the growth market of India is increasing by the actions and movements. Current research is based on the following objectives: -

Cuesta-contribution (current and future) to help understand the impact of India's major events.

## 2. LITERATURE SURVEY

Gupta (1972) in his book and studied the results of customer service in India, and that he has a lot of proposals to improve performance. Profitability and research funding highlights the need to ensure the integrity of the game. This is one of the branches of the case to improve the proposed legal capital. The study also confirms that stress can lower the cost of small business protection. Panda (1980) examined the role of the stock market before and after independence, India. The selected companies are all state-owned companies representing a third of a four research program. Population meanings will no longer be protected against the monopoly of a class or group of people. He is fascinated by a small and middle-class number. This is the first stage of web pages that the vast majority of income earned. Gupta (1981), especially for startups, new capital distribution problems with "return on capital" events, such as income, requires some research and extensive analysis.

A new problem for local buyers is recommended, as they affect the price of products. The value of income and capital. This study will evaluate the rate of return on capital, sound and timely, as the return of several differences. Jawahar Lal (1992) gives a brief overview of India's contribution and evaluation of its investment decisions. He used his knowledge and understanding of financial information and a great deal of effort to understand the area. Often companies of various investor personal needs and the annual report of

the company and other reports, as they are not taken correctly, you can get a general idea of the information, L.C. Gupta (1992) estimated that the Indian market evidence of the existence of the desert, their study demonstrated. Characteristics of the stock market in India, because the stock market unstable nature and rapid assessment reflect the uncertainty of the rest of the money and the large contribution. If it exceeds short-term forecasts, it could lead to "false prices," he said. The future prices of artificial distribution, financial soundness, and should not be taken with property, or, in other words, fraud, etc. sculptors, and that was provided. Nabhi Kumar Jain (1992) for the purchase of the stock exchange is described in a series of tips.

The manufacturing company was going to be bought, the company can grow. Various activities in various growth companies, as well as the fastest growing economy and stock buying, This company is owned by the company or in its economic growth, which is offered for sale. You have previous shares sold at the wrong choice, and then you see you have made a mistake. Buying and selling the best identified and mitigated Portland prices, and the only opportunity for you to decide when to make a decision. Pyare Lal Singh (1993), and his research and analysis determines the Indian capital, labor, and the quantity of money as a common source of the primary market. In these families, the public and private sectors, to provide benefits from various sectors of the economy. On May 20, 1990, the investment number is 150 Pounds (7.5 times). Other sources of capital for venture capital companies since 1981 have increased inequity participation by 35.01% in 1989 to 52.94% per year increased significantly to 16.21% and 30.14%. Sanjay Damodar (1993) as a risk management tool, in particular, described in the "future" and "subsidiary". The main objective of the outsourcing of fund managers to control or reduce the risk of his nature has become a regular person, he said. It is an important element of "risk management" and the economic future of these instruments risk management for one year or less short period, in other words, if you need to explain

how important it is. To benefit from the protection or short-term costs, it is relatively cheap and accessible. Its low costs, as well as the implementation of effective risk management, are open to companies, and they are very short-term. R. Venkataramani (1994) described the use and risks of derivatives. As a result, it is not yet fully understood, the foreign object can lead to dangerous situations. He knows, because of the uncontrolled nature will be removed from the market, more foreign products, soy, because of its sensitive nature, and is very beautiful.

He came with the entrepreneurs about the number of OTC banking business. OTC products (eg futures and options), tailored to the client's needs and serve as the ultimate goal, He expensive chicken as a tool to use, he said. Amanullah and Kamaiah (1995) studied the benefits of market integration Ravallion, correct errors in the Indian securities market, conducted a study. 1980-1983 was a close link between the five regional markets in India that are used in the data, stock index monthly RBI, namely Bombay, Madras, Delhi, Ahmedabad Cup. According to the authors, with a slight decrease in the market prices, the results of the five sales markets and fault models shown on the balance between long-term relationships. Various tests and research for the benefit of Bombay, Madras and Calcutta market find no evidence of this can be found in the case of Delhi and Ahmedabad. PattabhiRam.V. (1995), the need for analysis of the initial analysis of the relationship with the (media) before the selection of a single enterprise, He has no contribution to the cost and the price for Fields searched. The maximum difference between the cost price and warranty, India's gold market, good communication networks, often due to lack of information on price and sticking to the control and provisions for free, expert, etc. said: ensures that the value of the company and the long-term. Indian securities market capitalization of only contributes to better research outcomes. Karajazyk (1995) studied an aspect of capital markets and financial input. He said: "Only the Law" Risk assessment and measures to identify deviations from the theory

of the balance of multifactorial used.

That the rights of the countries trade (four sets of 24 and 20, including emergencies), is developing a market share of this market, or the market has proven to be higher than for developed markets. To make the size of the increases and decreases, Error's maximum cost will be drastic changes in capital cases. In the latter case, it is not symmetrical; markets of developed countries and developing markets. His studies, Debjit Chakraborty (1997), economic growth and stock market movements, trying to create a link between the signs, He is also the securities market and reverses the effects of climate change. Reasons include the level of money supply and GDP growth, fiscal deficit, and interest rates on loans. With the establishment of the stock exchange, shares of 100 companies and 100 BSE National Index, Studies of these payments, the impact of market movements in the price index, C / D, and financial instability and political stability can also be effective. Redel (1997) between 1970 and 1994 to consolidate the Central Asian capital market development, interest rates, such as direct capital investments, and bond prices change, He is widespread, especially in the trade and financial sectors, and economic reforms, developed in the 1990s as a result of the Asian countries in improving the capital markets and merger knew that this was the main reason for the economic crisis, capital market development. In 1990, many countries have not been discussed. To reduce these risks and strengthen the Central Asian countries to accelerate the process of economic recovery and concluded that we need to maximize the benefits of global capitalism into the market. Avijit Banerjee (1998) is available for the construction of the value of the property portfolio analysis, fundamental analysis, and technical analysis. The initial analysis is to compare the price of the domestic market value and may decide to purchase, sell, or invest. Fundamentals of economy, industry, and companies to determine the value of the security, 1.V M.p above, the column lower than the price and must be purchased. He Analytics to realize that

it is not possible to find out about a half, I guess so.  
In any area, Technical analysis is weak

### 3. CONCLUSION

Stock achieved an artificial increase in the number of small donations to several institutions; contributions from all the various inputs are vulnerable. This is a reasonable price that will allow a more diversified and professionally managed portfolio of stock, for the average person is very reasonable and it requires effort. the reconciliation of the literature is clear: investment in the company's distribution list, and at the same time, increase profitability and performance, a market price for the desert. Risk is measured and calculated. However, the risk is calculated based on historical volatility. India Stock Market Index on the index. Moving the securities market is very volatile, higher investment, growth indicators, will affect political stability and further financial instability. Assessment of the theories which are important for fundamental analysis, technical analysis, and others, Deployment costs reduction of recurrent and short-term traders, the prospects for effective risk management, effective, and it will be hard. India as the new emerging markets are growing rapidly Motorcycle's future. So far, only a small proportion of households in the domestic market in India, but spent every year with 7-8% GDP growth in the financial market, we have more money to join the race. Perhaps this is for the foreign companies the right to consider a significant contribution to the success of India's time has come.
