A STUDY OF PERFORMANCE OF MUTUAL FUNDS

Nyalakanti Akhila, Master of Business Administration,
M. Umrez, Assistant Professor, Department of Master of Business Administration,
Malla Reddy Engineering College and Management Sciences, Medchal, Telangana – 501401.

1. INTRODUCTION:
HDFC United Fund and the property is maintained that the most guarded in the country, who have performed the average fund in the noblest of all categories, has become one of the best since 10 December 1999. It is about the experience.

Funds are investment professionals who managed that many investors have the cash to purchase securities. Investors can be retail or institutional.

These funds have shortcomings and disadvantages in terms of direct investment in the security of individuals. The main advantage of mutual funds is both mutual economic development, make money and large, lie and managed by professional investors. The sides are not, investors in mutual funds must pay the costs and expenses.

The main structure of the fund, including funds open, investment funds and open funds. Exchange-traded funds (ETFs) are open or fund an equity investment is traded on the stock exchange. Terrace funds are to be sold to the money that the company is traded again to increase profits.

Fund investments are classified according to the investment fund market in basic currency, fixed income or equity funds, capital or equity capital, various types of funds, or funds that are not. Funds can also be classified as index funds, are easy compared to hedge funds or funds of funds that are actively managed.

1.2 CONCEPT OF MUTUAL FUNDS

Funds flow is money that investors pay for stocks for investment purposes, according to a defined. Ownership is a mutual fund or fund "mutual", it belongs to all investors. Owners of investors in the fund have the same number of preferred funds in full.

DEFINITION
Investment is money you have in the form of a number of other members of the border that is not. Again, you and other investors each share a portion of the funds. Asset funds for that purpose to be mined in the portfolio investment funds. Fund growth is strong search growth through long-term investment in shares of the company or a small part of the market is growing rapidly. Difficult to fund growth also referred to as capital appreciation fund."

Statement of Purpose

The purpose of mutual funds, such as corporate income tax, which is to search for products or services that are needed for those salaries. Finance provides many important benefits for small investors: customization, management experts, strategy, cost, access to specialized markets and investment easier. The most important thing is that they help the customers to invest to help them to achieve their financial goals.

OBJECTIVES:-

The main objective of this program is to shorten HDFC's income stream and invest in debt securities and money market instruments.

- Provide a brief summary of the capabilities provided by Mutual Investment.
• You are ready to give an idea of the type of box.
• Invest in market opportunities for traded funds.
• Increase funding for individual systems and incentives.
• Based on the process of managing money with each other.
• Explore the latest updated currency in India.
• Avoid having ideas about how to finance.

THE PROJECT DESCRIPTION

The overall reputation of the project will be satisfactorily expanded, especially in interest income and sound release in related units. The system/plans return to obscurity in the medium term and our goal is to reduce the risk and equity of capital gains while working the invested unit.

Money suggests that the path to a better group of investors means that they can talk to each other about investing in more investment vehicles and use money management to buy cash. If you buy mutual stocks, you have stocks, bonds, and other securities to invest in the fund.

2. LITERATURE SURVEY

There are much kinds of literature for monitoring the performance of the fund. A researcher in the study, research that has led to the preparation of the performance was discussed in this section.

1. Sharpe, William F. (1966) proposes a criterion for performance evaluation portfolio. According to the results achieved in the areas of portfolio analysis, economist’s economy Jack L. Treynor has suggested a new prediction for the performance of the funds, which differ from almost all situations previously to integrate state of the financial hassle. a way that is simple but meaningful.

2. Michael C. Jensen (1967) adopted measures such as the risk of performance shares to evaluate how predictive power managers contribute to the money funds again. As record Statman (2000), is aware of the fund portfolio return is based on the results of a benchmark, where the portfolio is expected to have a comparative deviation. S. Narayan Rao, et. al., the performance of Indian funds in emerging markets are evaluated using the performance indicators, risk and return analysis, the ratio Treynor, Sharpe ratio, the size of Sharpe, Jensen size and level of popularity.

3. Researchers using 269 percent (about 433 s) to calculate related. Then, after eliminating the funds are less than the income free, 58 projects were finally used for further analysis.

4. The performance criteria allowing most financing projects in 58 sectors to provide investors with expectations to maximize your money back into the expectations based on a systematic risk-based payment. And total risk.

5. Bijan Roy, et al. al., makes repeat earlier about the state share a common Indian. This document uses the technique called conditional policy achievement in the example of the eight joint venture projects India.

6. The cumulative effect of the remainder information leaflet on the combined analysis of the performance of CFOs given the relationship with India.

7. The results indicate that the use of information to improve the results of the joint venture projects, which can cause interference in the right direction and reduce the number of negative data releases.

8. Mishra et al. (2002) to measure the performance of the fund’s rate low. In this document, the size of the portfolio is limited in the time described.
9. Has the risk to a time-efficient only countries that back in the bottom of the "target" of a previously have previous interest rate risk. Kshama Fernandez (2003) evaluated the implementation of the index funds in India. This document assumes the error in the index currency in the index currency.

3. RESEARCH METHODOLOGY

RESEARCH METHODOLOGY

Support research that is now supported by a strong framework for the research process. Below, all the principles for several stages of research expressed. In other statistics, more information about the publication, internal records, books, journals, web store. More fundamental is more information to the responses.

STATEMENT OF PROBLEM

"The mutual Investment Fund has increased the number of local, practical and cooperative actors in recent days.

This has led to the development of a series of products that offer different types of financing to the client. Research forms now a proposal for the purposes of investing money in cost

NEED FOR THE STUDY

The main factors to be studied are the need for changes in the financial markets and changes in the level of understanding available to financially viable investors.

There are a number of custom currencies in the financial markets. Investment income and holding behavior are also updated in the updates. The producer's fertilizer rate also increased rapidly.

As soon as they risked choosing a fundraising job and Reset, they had only chosen financial services. But now there is no problem. Investors focused more on all money assets with no common objectives, portfolio equity, risk, Total Return Fund, Fund One, success, experience in financial management, a fund managed assets and fund manager, free ratio, diversity, tax debt, falsehood, rigidity. And cash flow earnings, fund managers and cash flow rates.

So there needs to evaluate the best practices thought by investors in the chosen fund.

SCOPE OF THE STUDY

The study section is very simple and to evaluate all these services, fund purpose, portfolio collection, risk.

The Fund's Early Achievement Fund includes pool fund experience, fund manager experience, fund size, managed fund, comparison, adjustment, tax, interest, principal and actual income distributions, Fund, and rates.

RESEARCH OBJECTIVE

1. Compare the performance of different five-star funds with a three-year approach.

2. The system to collect and mark properties in the last three years.

3. Determine the level of investment risk associated with conventional payment schemes

4. DATA ANALYSIS & INTERPRETATION

Powerful research of this type should provide excellent data on a research basis. Discover the value of data. The data collected for the study comes from two primary and secondary sources.

1. Primary Data

This information is clear from the responses to the surveys.

The interviewees were interviewed and asked to complete a questionnaire. The first
part of the questionnaire addresses questions about changing age, gender, education, background, and income profiles.

The second part of the research lacks the beauty of future debt valuation and financial equity.

2. Secondary Data

Previously borrowing, developing relationships, and designing hypotheses, data were obtained from all sources.

Secondary sources of data for equity, debt, and hard money are government publications, newspapers, magazines, research reports, and encyclopedia, etc. The main source of data is the SEBI database.

STATISTICAL TOOLS APPLIED FOR ANALYSIS

Data is collected through surveys in the form provided by investors for specific characteristics. The number of interviewees shows a big difference. For each aspect of the attribute set, the number of respondents was ultimately calculated to indicate the difference in severity.

The intermediate measure is met: it is used to describe a brief description and calculation of capital, debt and cash equivalents. Chi-square test: Chi-square tests are used to test the results of the same differentiation that is used to study the effect of population differences, in cash.

LIMITATIONS OF THE STUDY

Genetic research cannot be done without interruption. As such, the study was limited by the general population, the heir and the size of settlements as his; Comments on the results of the evaluation of the above. Second, it is a transitory phenomenon that has a positive effect on the size of the large size model. In this test the magnitude of thought, attention has been paid to every aspect of the study.

1. Some of the answers are aware of the standard features and certain.
2. Some of the responses refused to detail
3. There is a feeling of bias in the responses from the participants.
4. Although the weakness in the upper, the examiner has chains for crossing the border and has been playing.
5. Victim teaching for six years and was rejected.

HDFC GROWTH FUND: -

There is some concrete evidence that suggested that birth control pills pay a premium for the risk of long-term. In order to achieve this, investments will be made from the point of view of the long-term.

Investment ownership has the same: - The way in which the value of the company is to buy an investment in a company. As such, it is important to have a perfect understanding of how a company's way.

Maintain Level Security: Indicators to determine the lack of value can be absolutely firm. The investment manager will try to buy the parts that make the value of the discount on the value of the capital in an attempt to save and search What is better.

Take a positive view on the market: - Portfolio investment will be updated on a regular basis to understand the effects of change-change business and financial situation as well as ideas for investors. Although the short-term market stability will affect the value of the portfolio, it is not intended to strengthen business decisions.
Approach to the market information: The decision to sell the shares to be based on the fair value is possible or not possible because of changes in the basic factors that affect the company or the market by the idea of the investment manager, the interest income is higher.

To implement an investment strategy that cost, will be important to meet the challenge of a routine. This gives them a broad understanding of the vision and commitment to long-term business objectives. This meeting will also include an evaluation of the key indicators of the quality of management, such as minority owner’s asks, ability problems, and how to make the allocation of monetary efficiency.

Communication and management also give you the opportunity to share the results that are correct and the tasks that have to be made. In short, the investment strategy is expected to be the basic database level than now, and the schedule. The object is to identify a "company that has growth potential and management is good at a good price".

5. FINDINGS OF THE STUDY

5.1 Findings

1. Most investors know each other's money, but should not do it well due to a lack of information about the financial system.
2. Investors spend more on the money.
3. Investors who prefer to finance mainly due to ineligibility and fees
4. There are many financial projects that people do not know well.
5. The last gap varies between 35% and 40%. Of course, this is one of the leaders who make a good call.
6. More response sees banks as an investment tool. It is a safe option for them and they do not have a clear idea of investing.

7. The case studies know different financial systems. When others want to advertise each fund, their name is Mutual ---- SBI Fund UTI, ICICI Fund.

5.2 Suggestion

After the data and information analysis is done. The following are some suggestions and recommendations, if implemented, would benefit the financial markets in India. By distributing the stock, short and long stories, as well as tips and advice, are generally available when there is a problem or problem on the market. Here in the report, the report was a recommendation and advice based on a holistic view of the impact of the facts, and many other things that the respondent gained in their roles during the investigation. The recommendations in this study have three components that can only foster higher incomes in India.

6. CONCLUSION

In this structure, the different money systems are accounted for in terms of capitalism. The analysis showed that there were many risks to continue, as well as that the investments in the system were very sensitive since the beta system runs between 0.71 and 1.10. The study also showed that almost all of the different systems were affected in 2013-14 when the market fell. Intermediate return values, Sharpe and tenor values. As the 2014-15 market booms and investors show more confidence in the system, market risk indicates that regulated earnings are good, as most systems have a positive side to the system, much higher than capital line A. HDFC. not too much. The highest scores for 2007-08 are different. UTI achieved better results in the 2008-09 trial, the joint IDFC program and the ICICI management update.
